OVERVIEW

Common Name	Scientific Name	Synonym
African Fern Pine	<i>Afrocarpus falcatus</i>	<i>Podocarpus gracilior</i>
Floss Silk Tree	<i>Ceiba speciosa</i>	<i>Chorisia speciosa</i>
Lemon Scented Gum	<i>Corymbia citriodora</i>	<i>Eucalyptus citriodora</i>
Red Flowering Gum	<i>Corymbia ficifolia</i>	<i>Eucalyptus ficifolia</i>
Trumpet Trees	<i>Handroanthus</i> spp.	<i>Tabebuia</i> spp.
Monterey Cypress	<i>Hesperocyparis macrocarpa</i>	<i>Cupressus macrocarpa</i>
Brisbane Box	<i>Lophostemon confertus</i>	<i>Tristania conferta</i>
London Plane Tree	<i>Platanus × hispanica</i>	<i>Platanus × acerifolia</i>
African Sumac	<i>Searsia lancea</i>	<i>Rhus lancea</i>
Japanese Pagoda Tree	<i>Styphnolobium japonicum</i>	<i>Sophora japonica</i>
Chinese Tallow Tree	<i>Triadica sebifera</i>	<i>Sapium sebiferum</i>
Water Gum	<i>Tristaniopsis laurina</i>	<i>Tristania laurina</i>

- 223 genera
- 753 cities in California

California Urban Forest Inventory: Sacramento

California Urban Forest Inventory

Number of trees in inventory: **119,790** Number of genera in inventory: **132** Number of species in inventory: **269**

Filter the inventory

County Climate Zone Family Genus Place: ... (1) Species Zip

Points are centered on the city jurisdiction and do not reflect specific locations. The size of the circle indicates the number of trees in the zip code boundary that are in the inventory, the color of the circle indicates the number of distinct species (blue regions have more species than yellow regions).

Count distribution of each species

	Species	Number of trees	Proportion
1.	Platanus x hispanica	14,516	12.12%
2.	Lagerstroemia	6,450	5.38%
3.	Sequoia sempervirens	6,410	5.35%
4.	Pistacia chinensis	5,933	4.95%
5.	Zelkova serrata	5,094	4.25%
6.	Quercus lobata	4,790	4%
7.	Pyrus calleryana	4,499	3.76%
8.	Liquidambar styraciflua	3,039	2.54%

URBAN TREE DETECTOR

Data Uses

- Tree density for 50 most populous cities
- Mean = 2,073 trees/km²

Data Uses

- Trees per capita for 50 most populous cities
- Mean = 0.82 trees per person

Data Uses

- Estimating the public and privately managed urban forest

○ Tree Detector Points

- Public Land (Parks)
- Street Buffers
- Public Trees
- Private Trees

Data Uses

- Breakdown of urban trees by land ownership
- Glendale and San Francisco have the highest proportions of public trees

California's Native Trees in the Urban Environment

CAL POLY

California's Native Trees

Coast Redwood in
Arcadia, CA

Coast Live Oak in Santa Cruz, CA

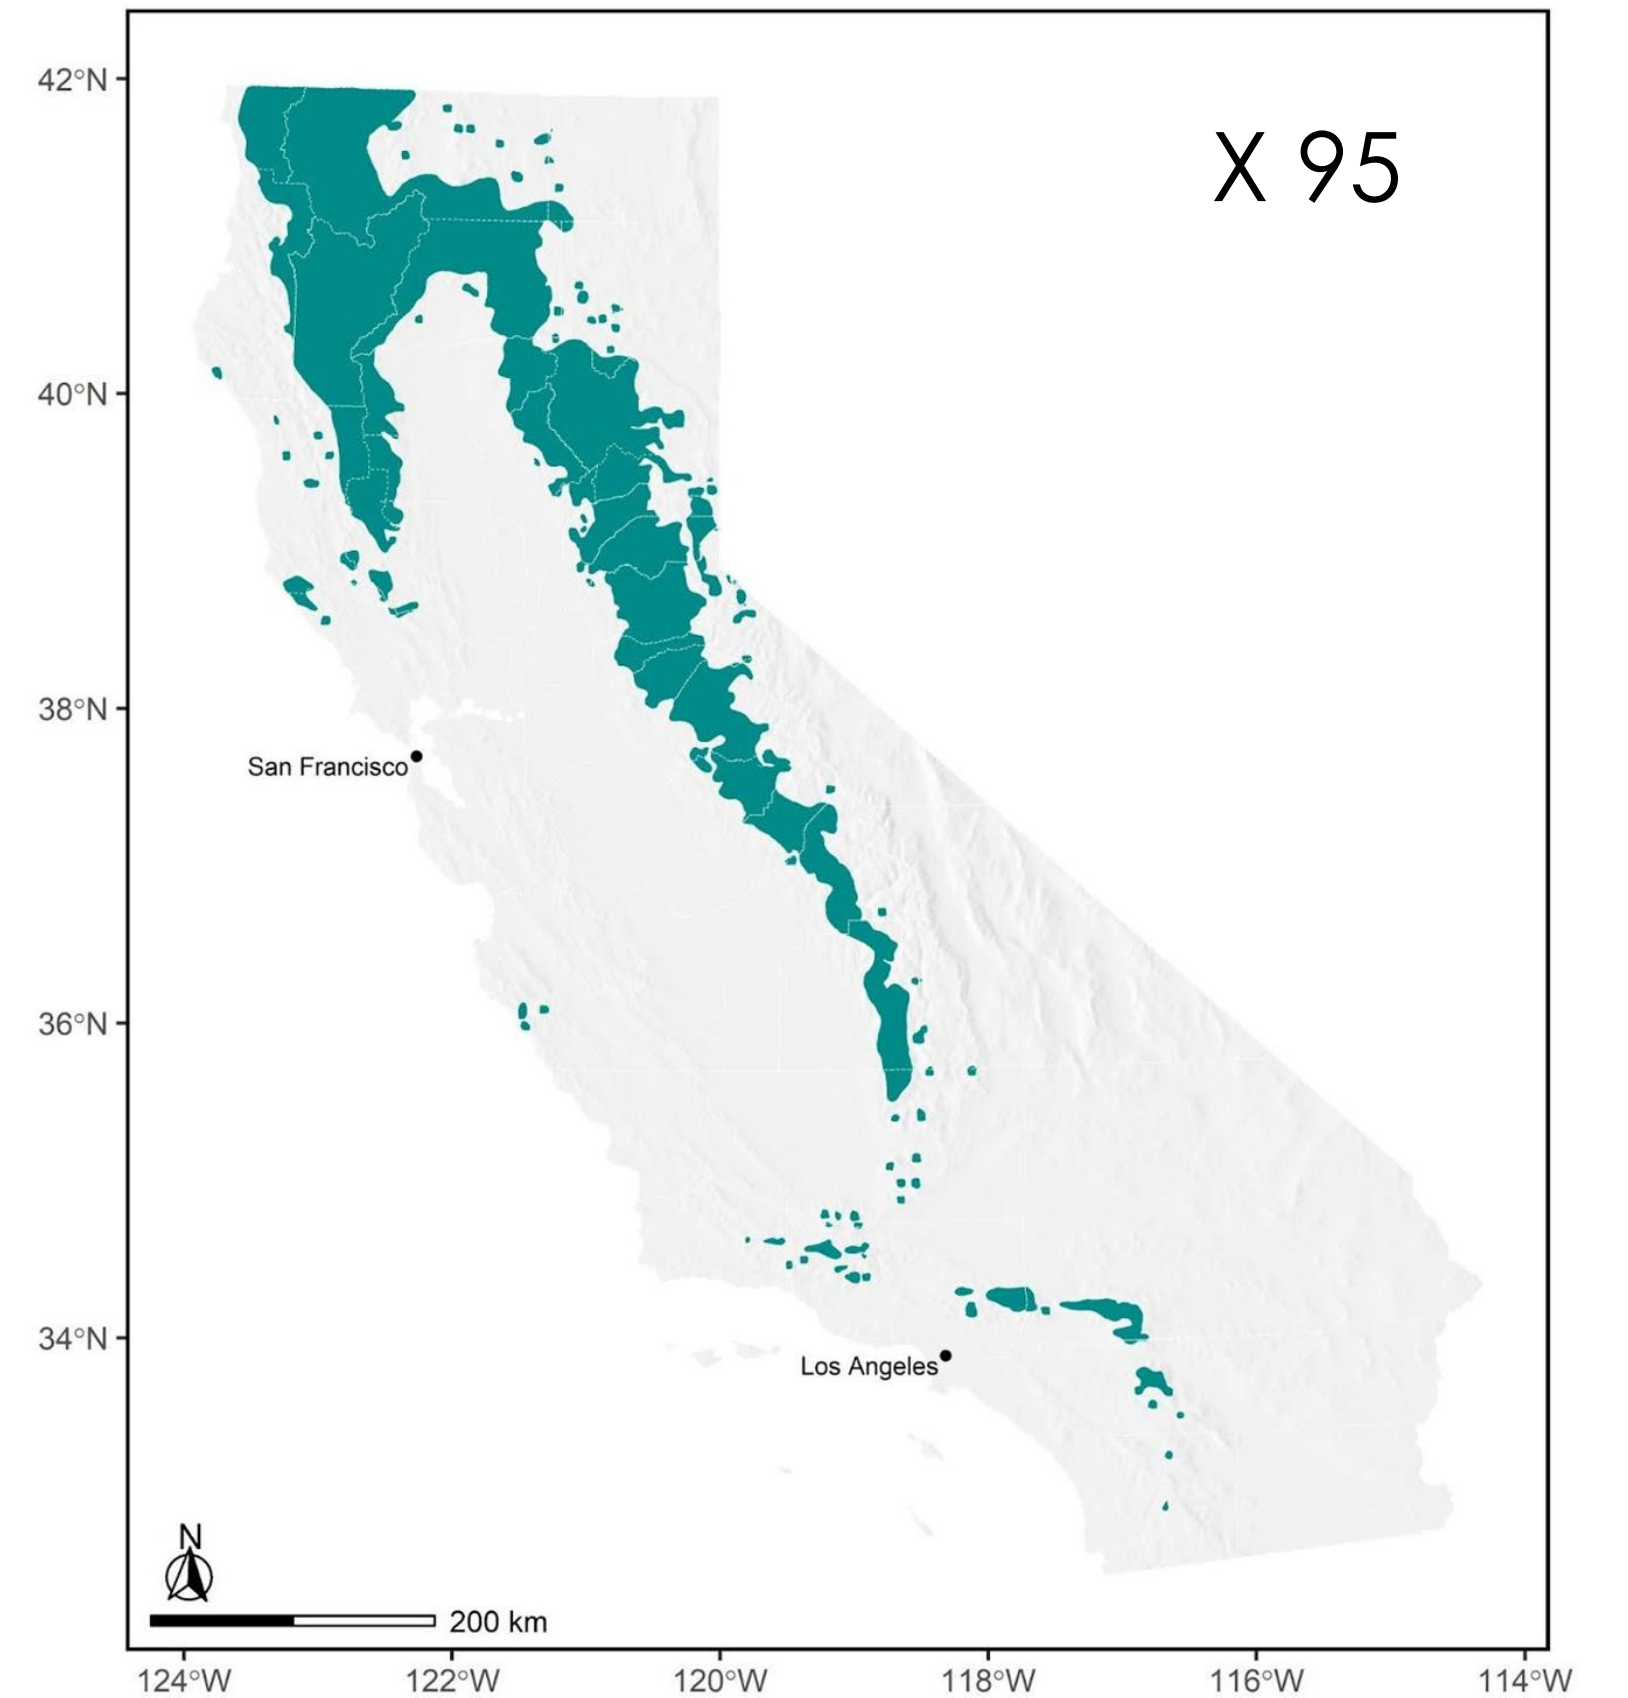

Monterey Cypress in
Santa Barbara, CA

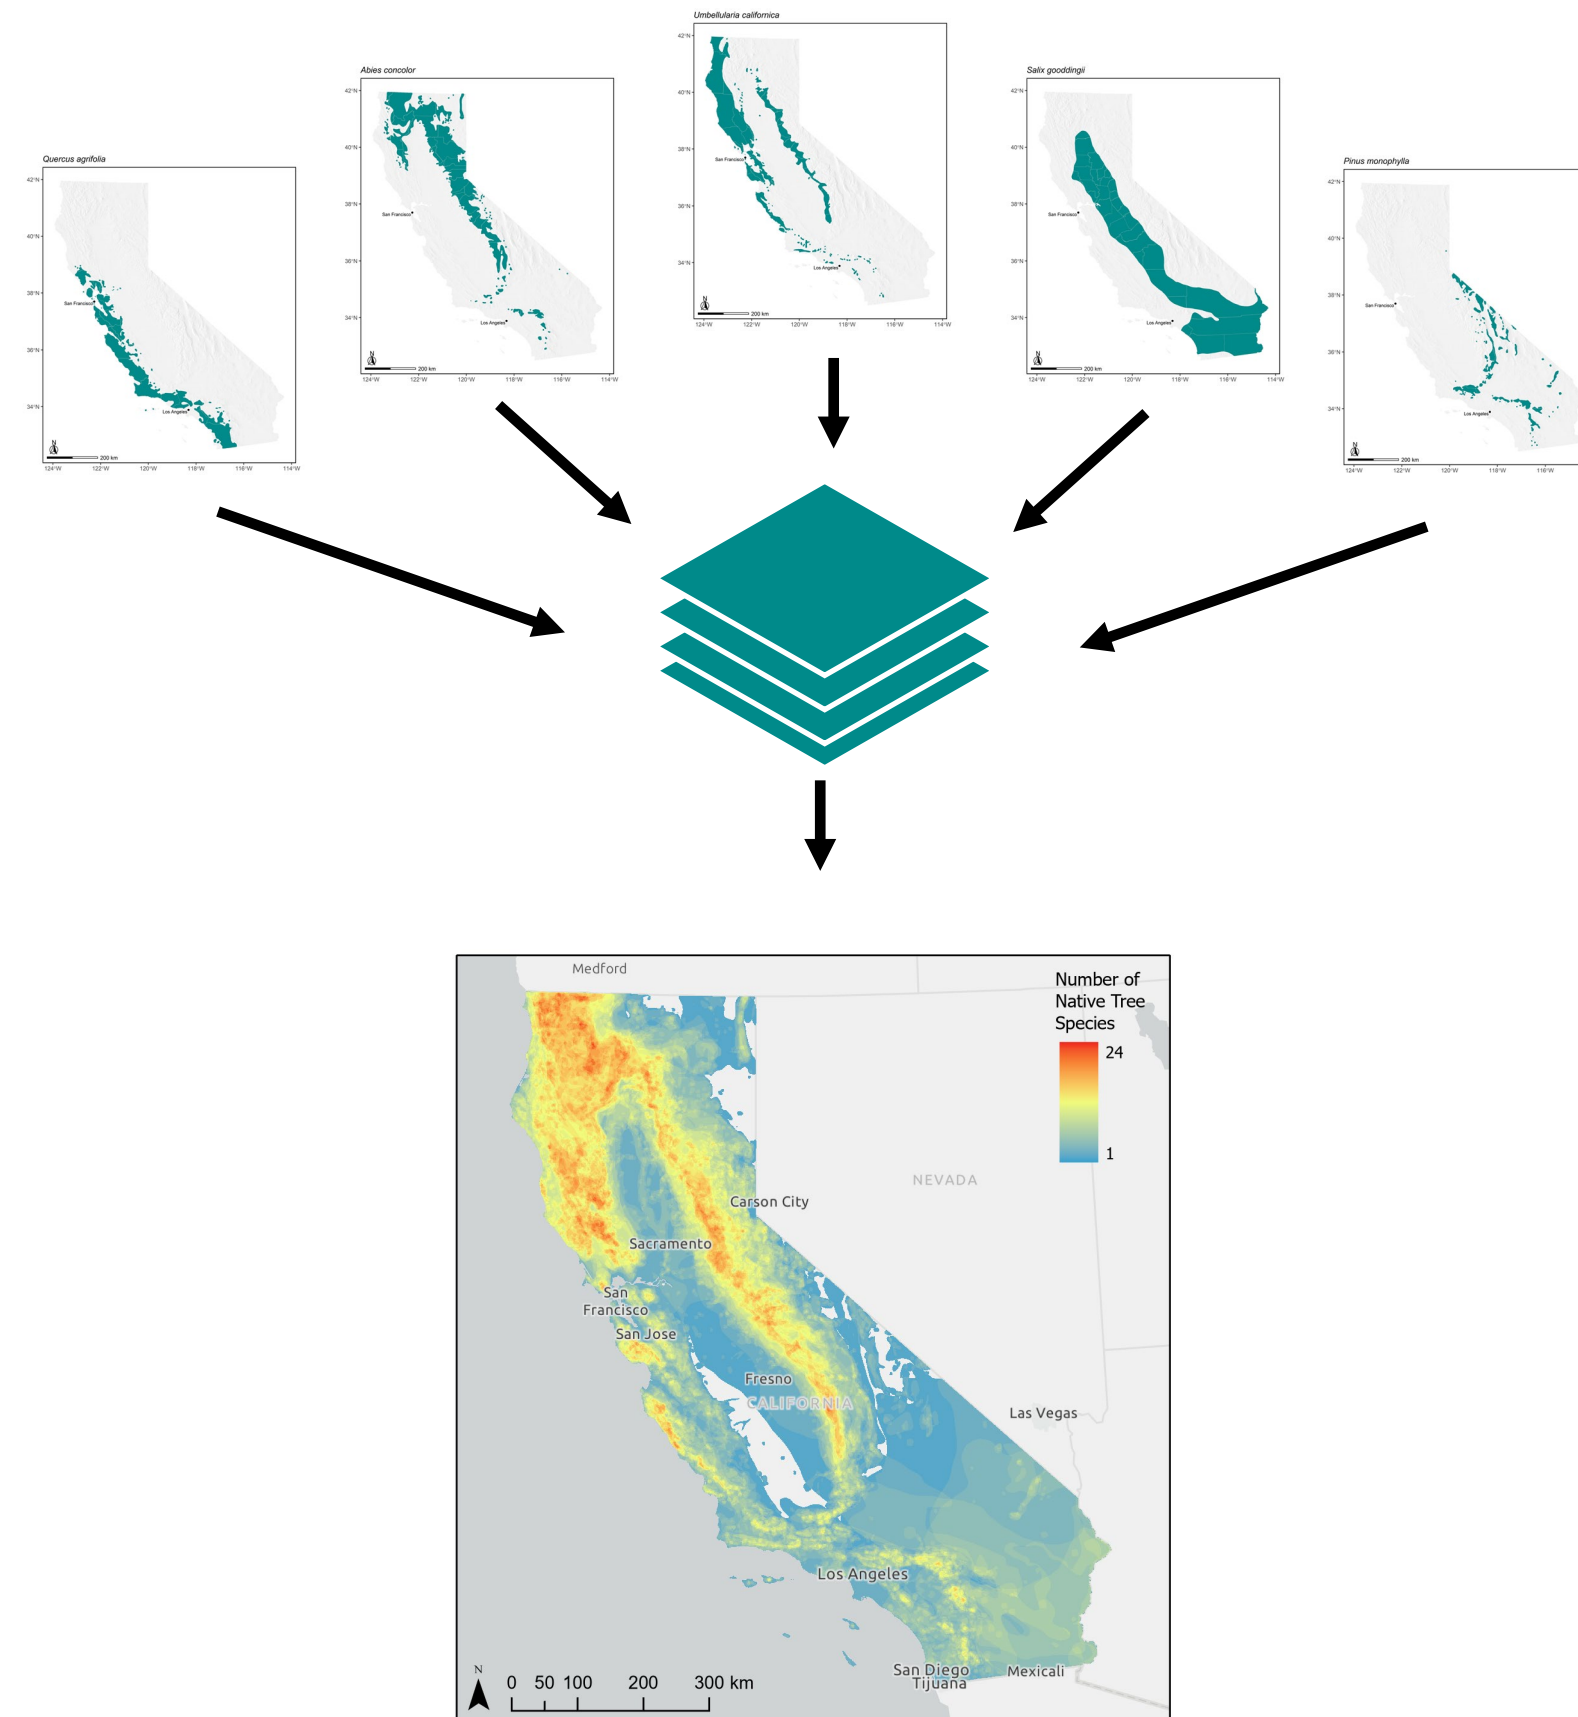

Where are California's Trees?

Pinus lambertiana

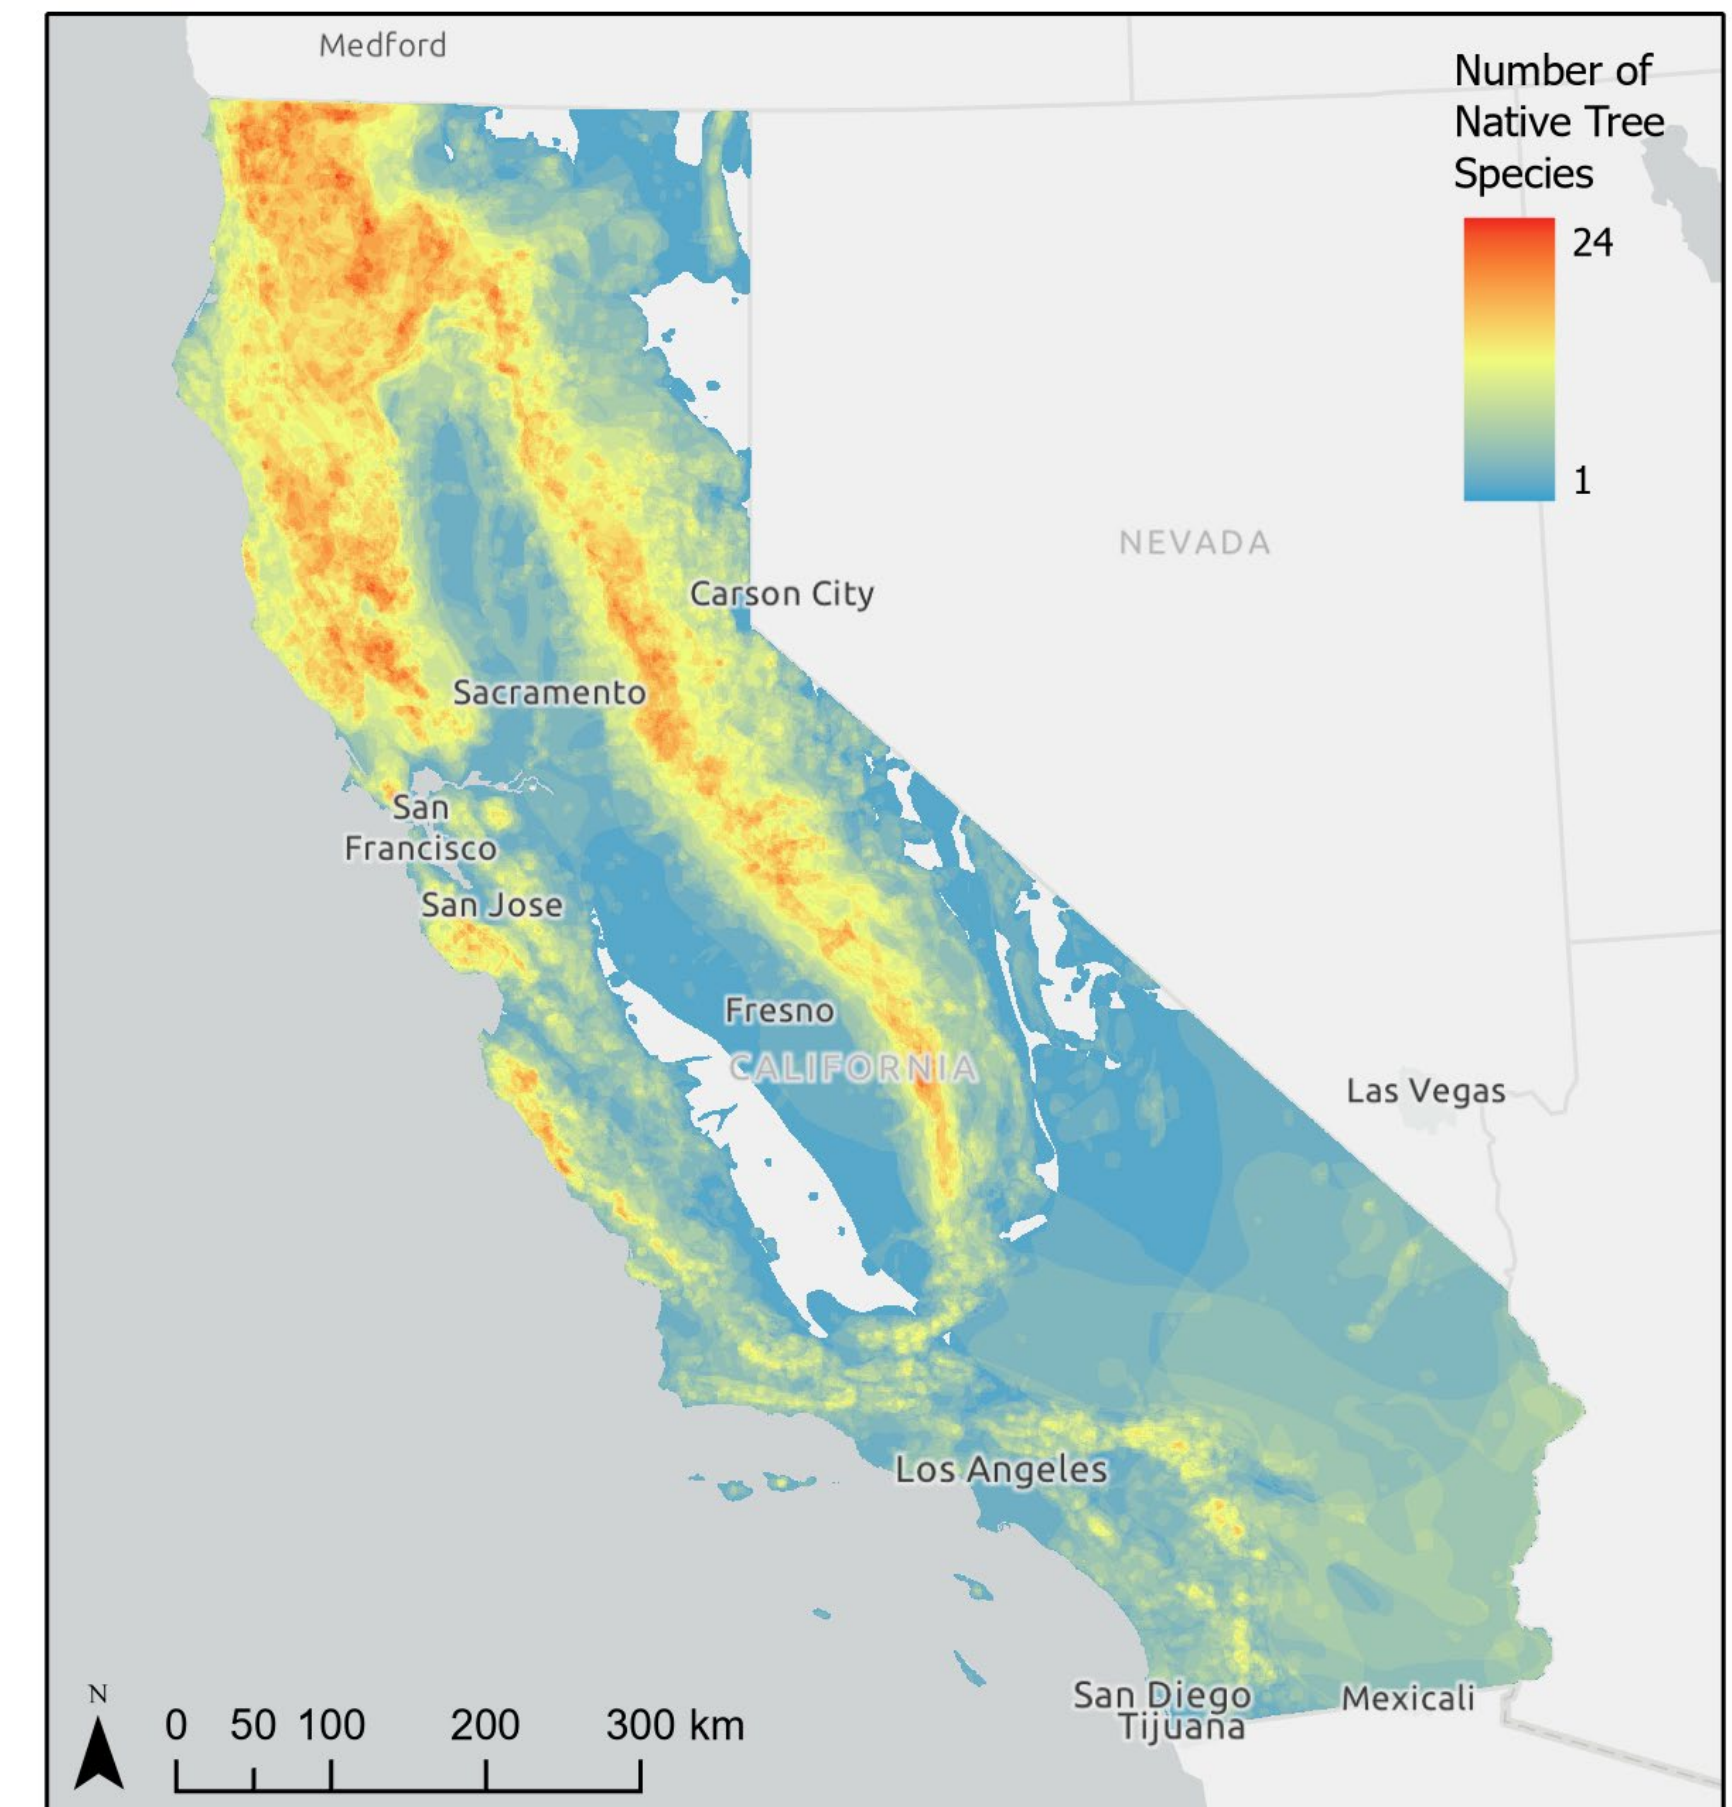

Heat Map of Native Tree Diversity

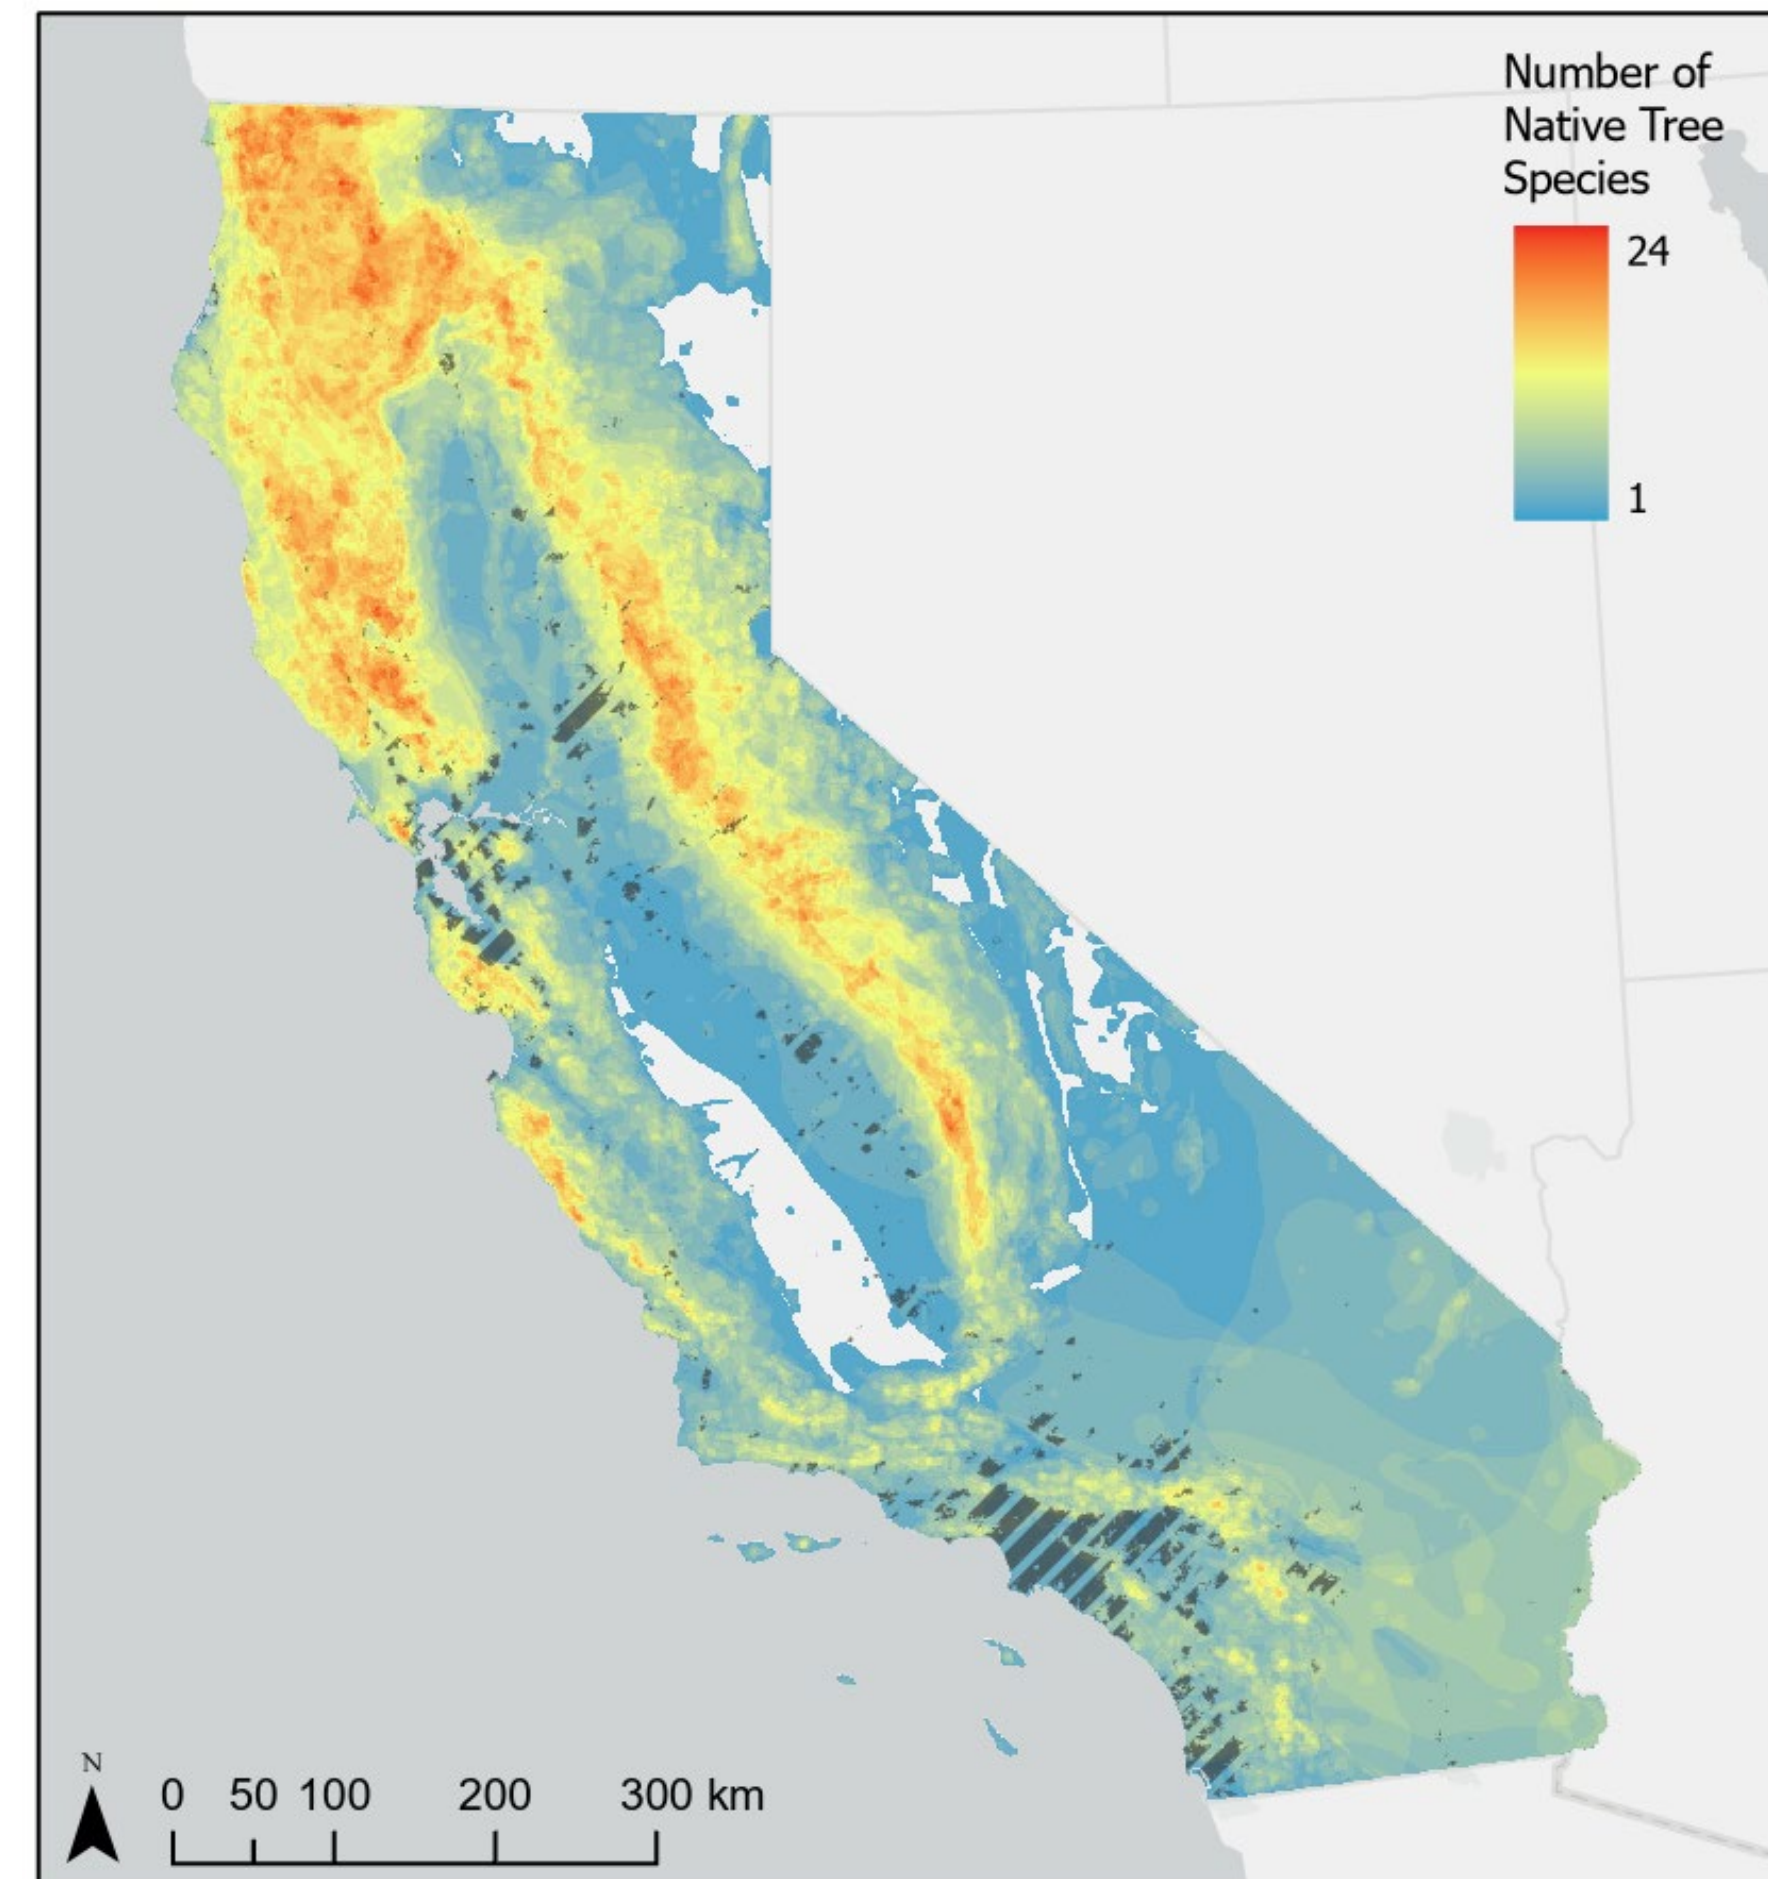

Native Tree Heat Map

- More species in the Sierras and Coast Ranges

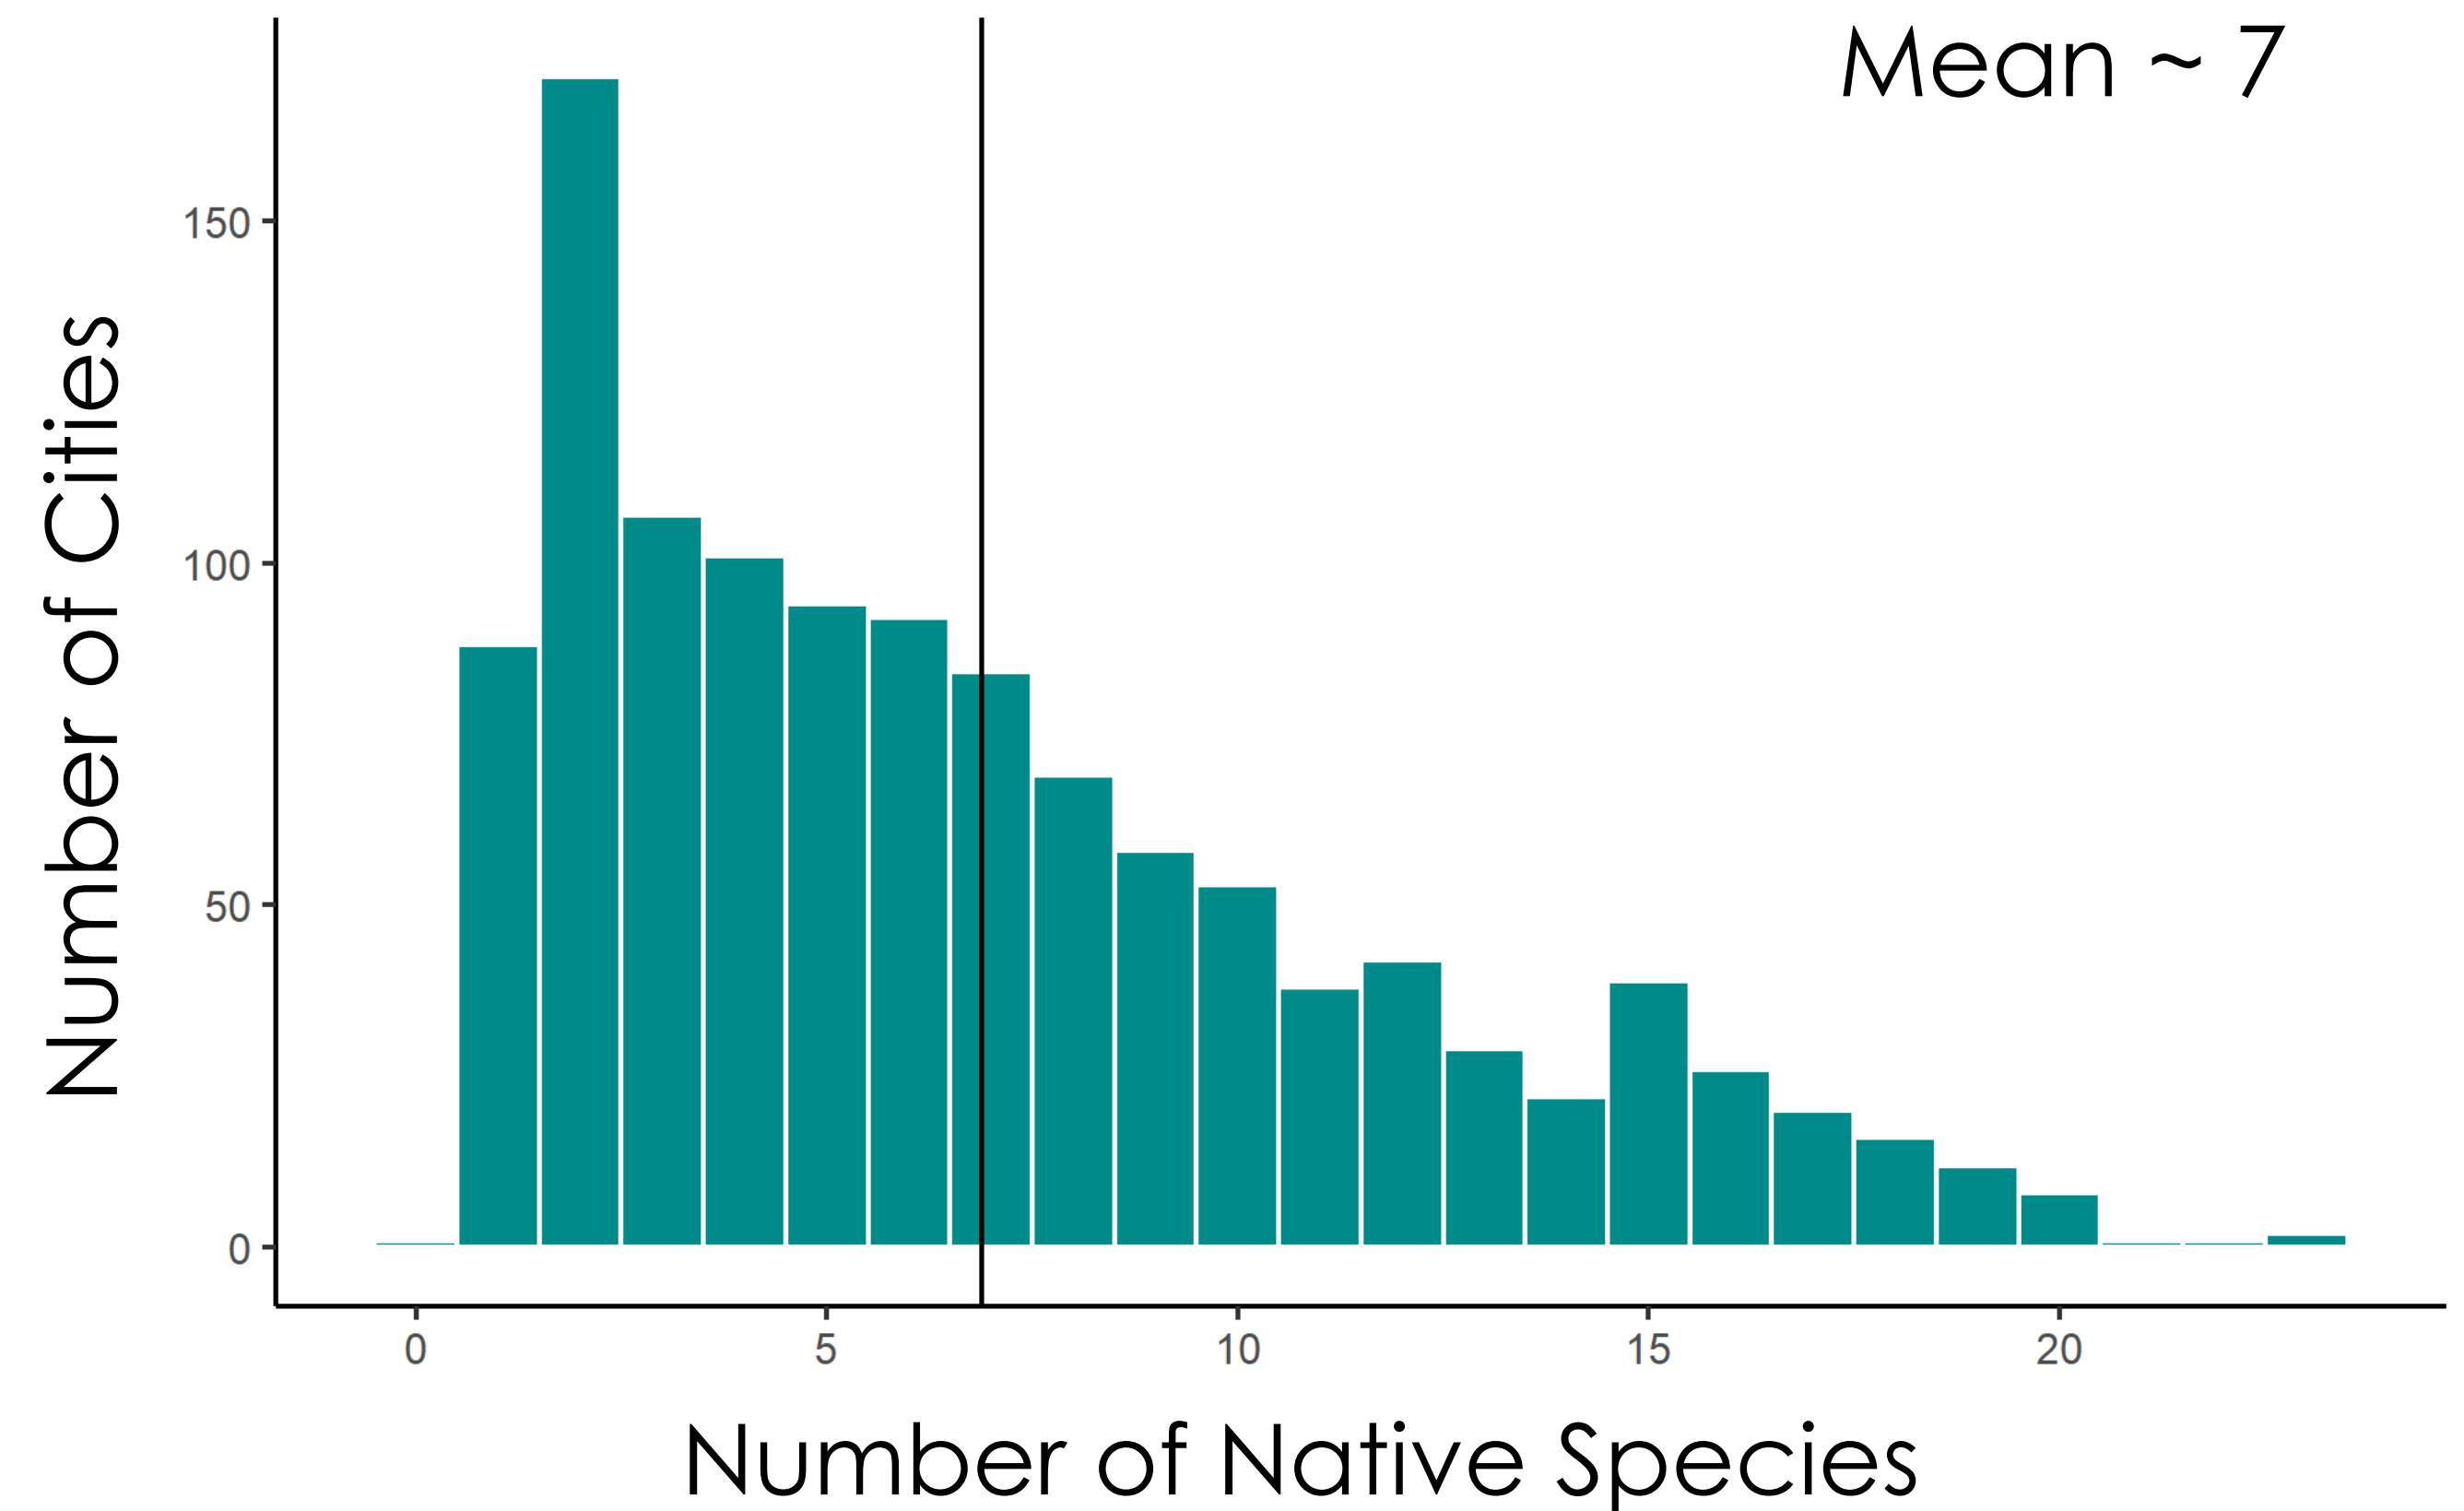

Native Tree Heat Map

- More species in the Sierras and Coast Ranges
- Major urban areas have few native species
- We created native species lists for each of California's urban areas

Urban Native Trees

- Relatively few species native to cities
- Rarely more than ten species of trees native to urban areas

RESULTS

Los Angeles: 15 Native Tree Species

California Bay Laurel,
Umbellularia californica

Western Sycamore,
Platanus racemosa

Coast Live Oak,
Quercus agrifolia

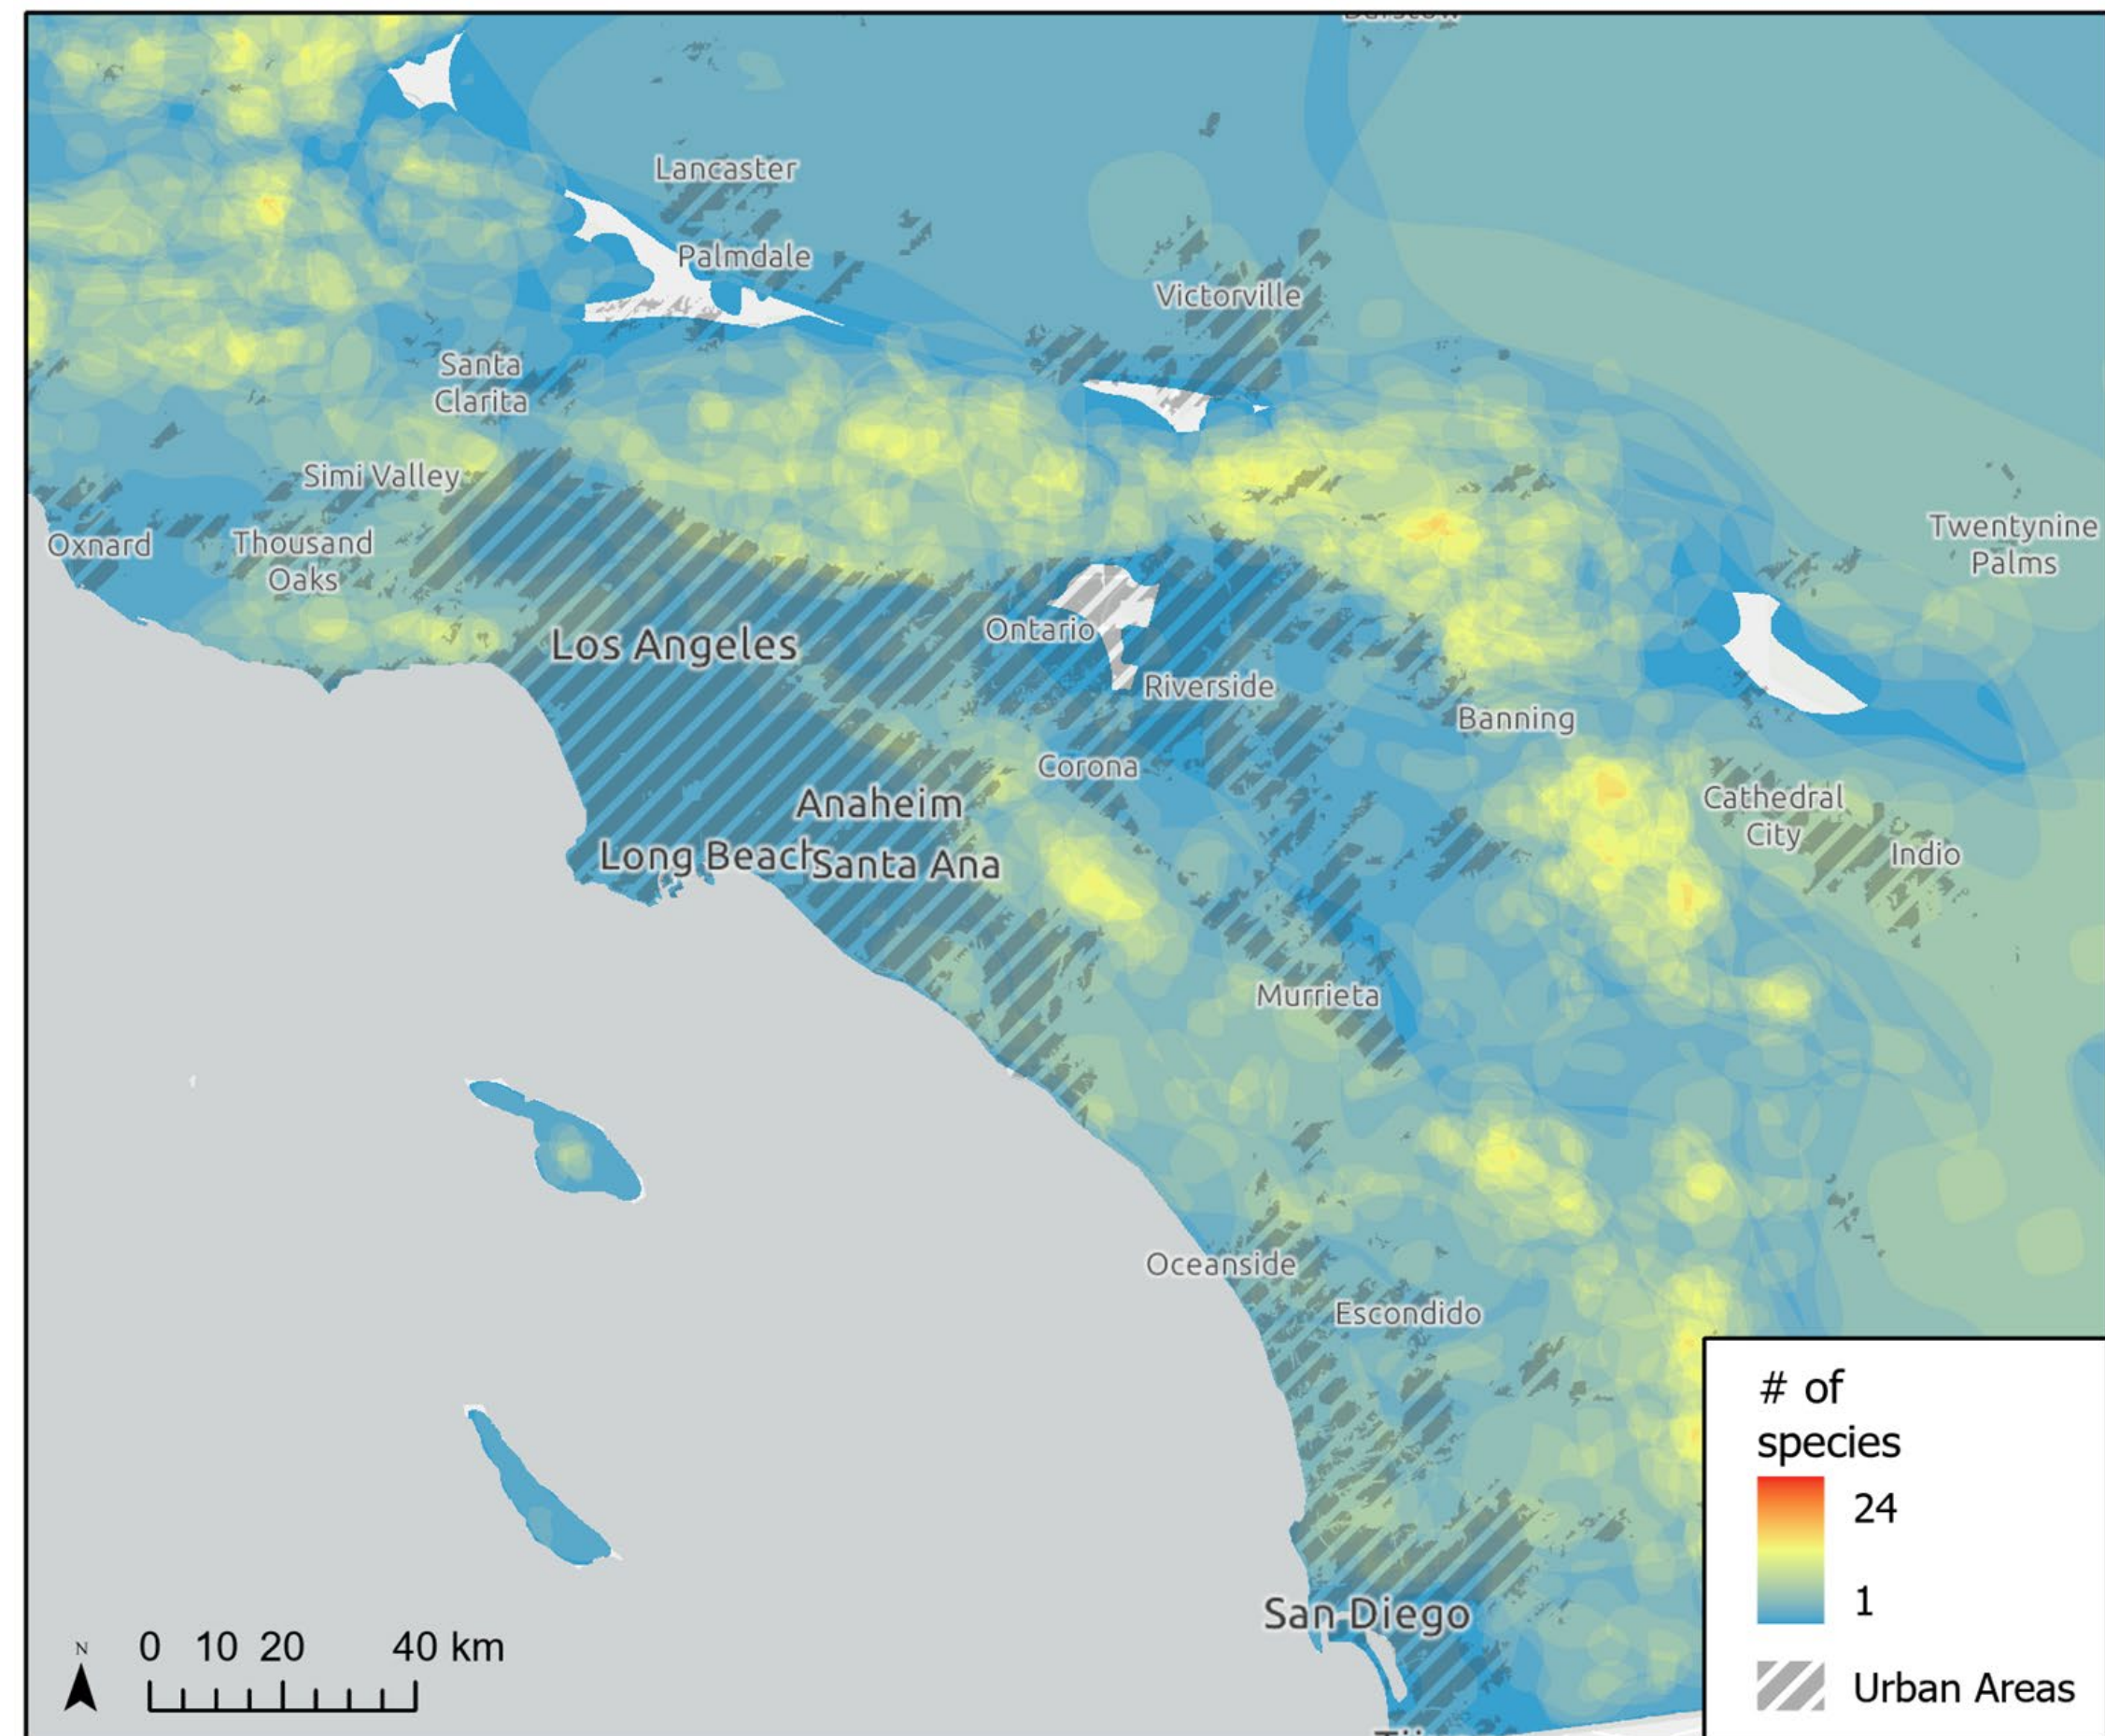

White Alder,
Alnus rhombifolia

RESULTS

Los Angeles: Native Trees

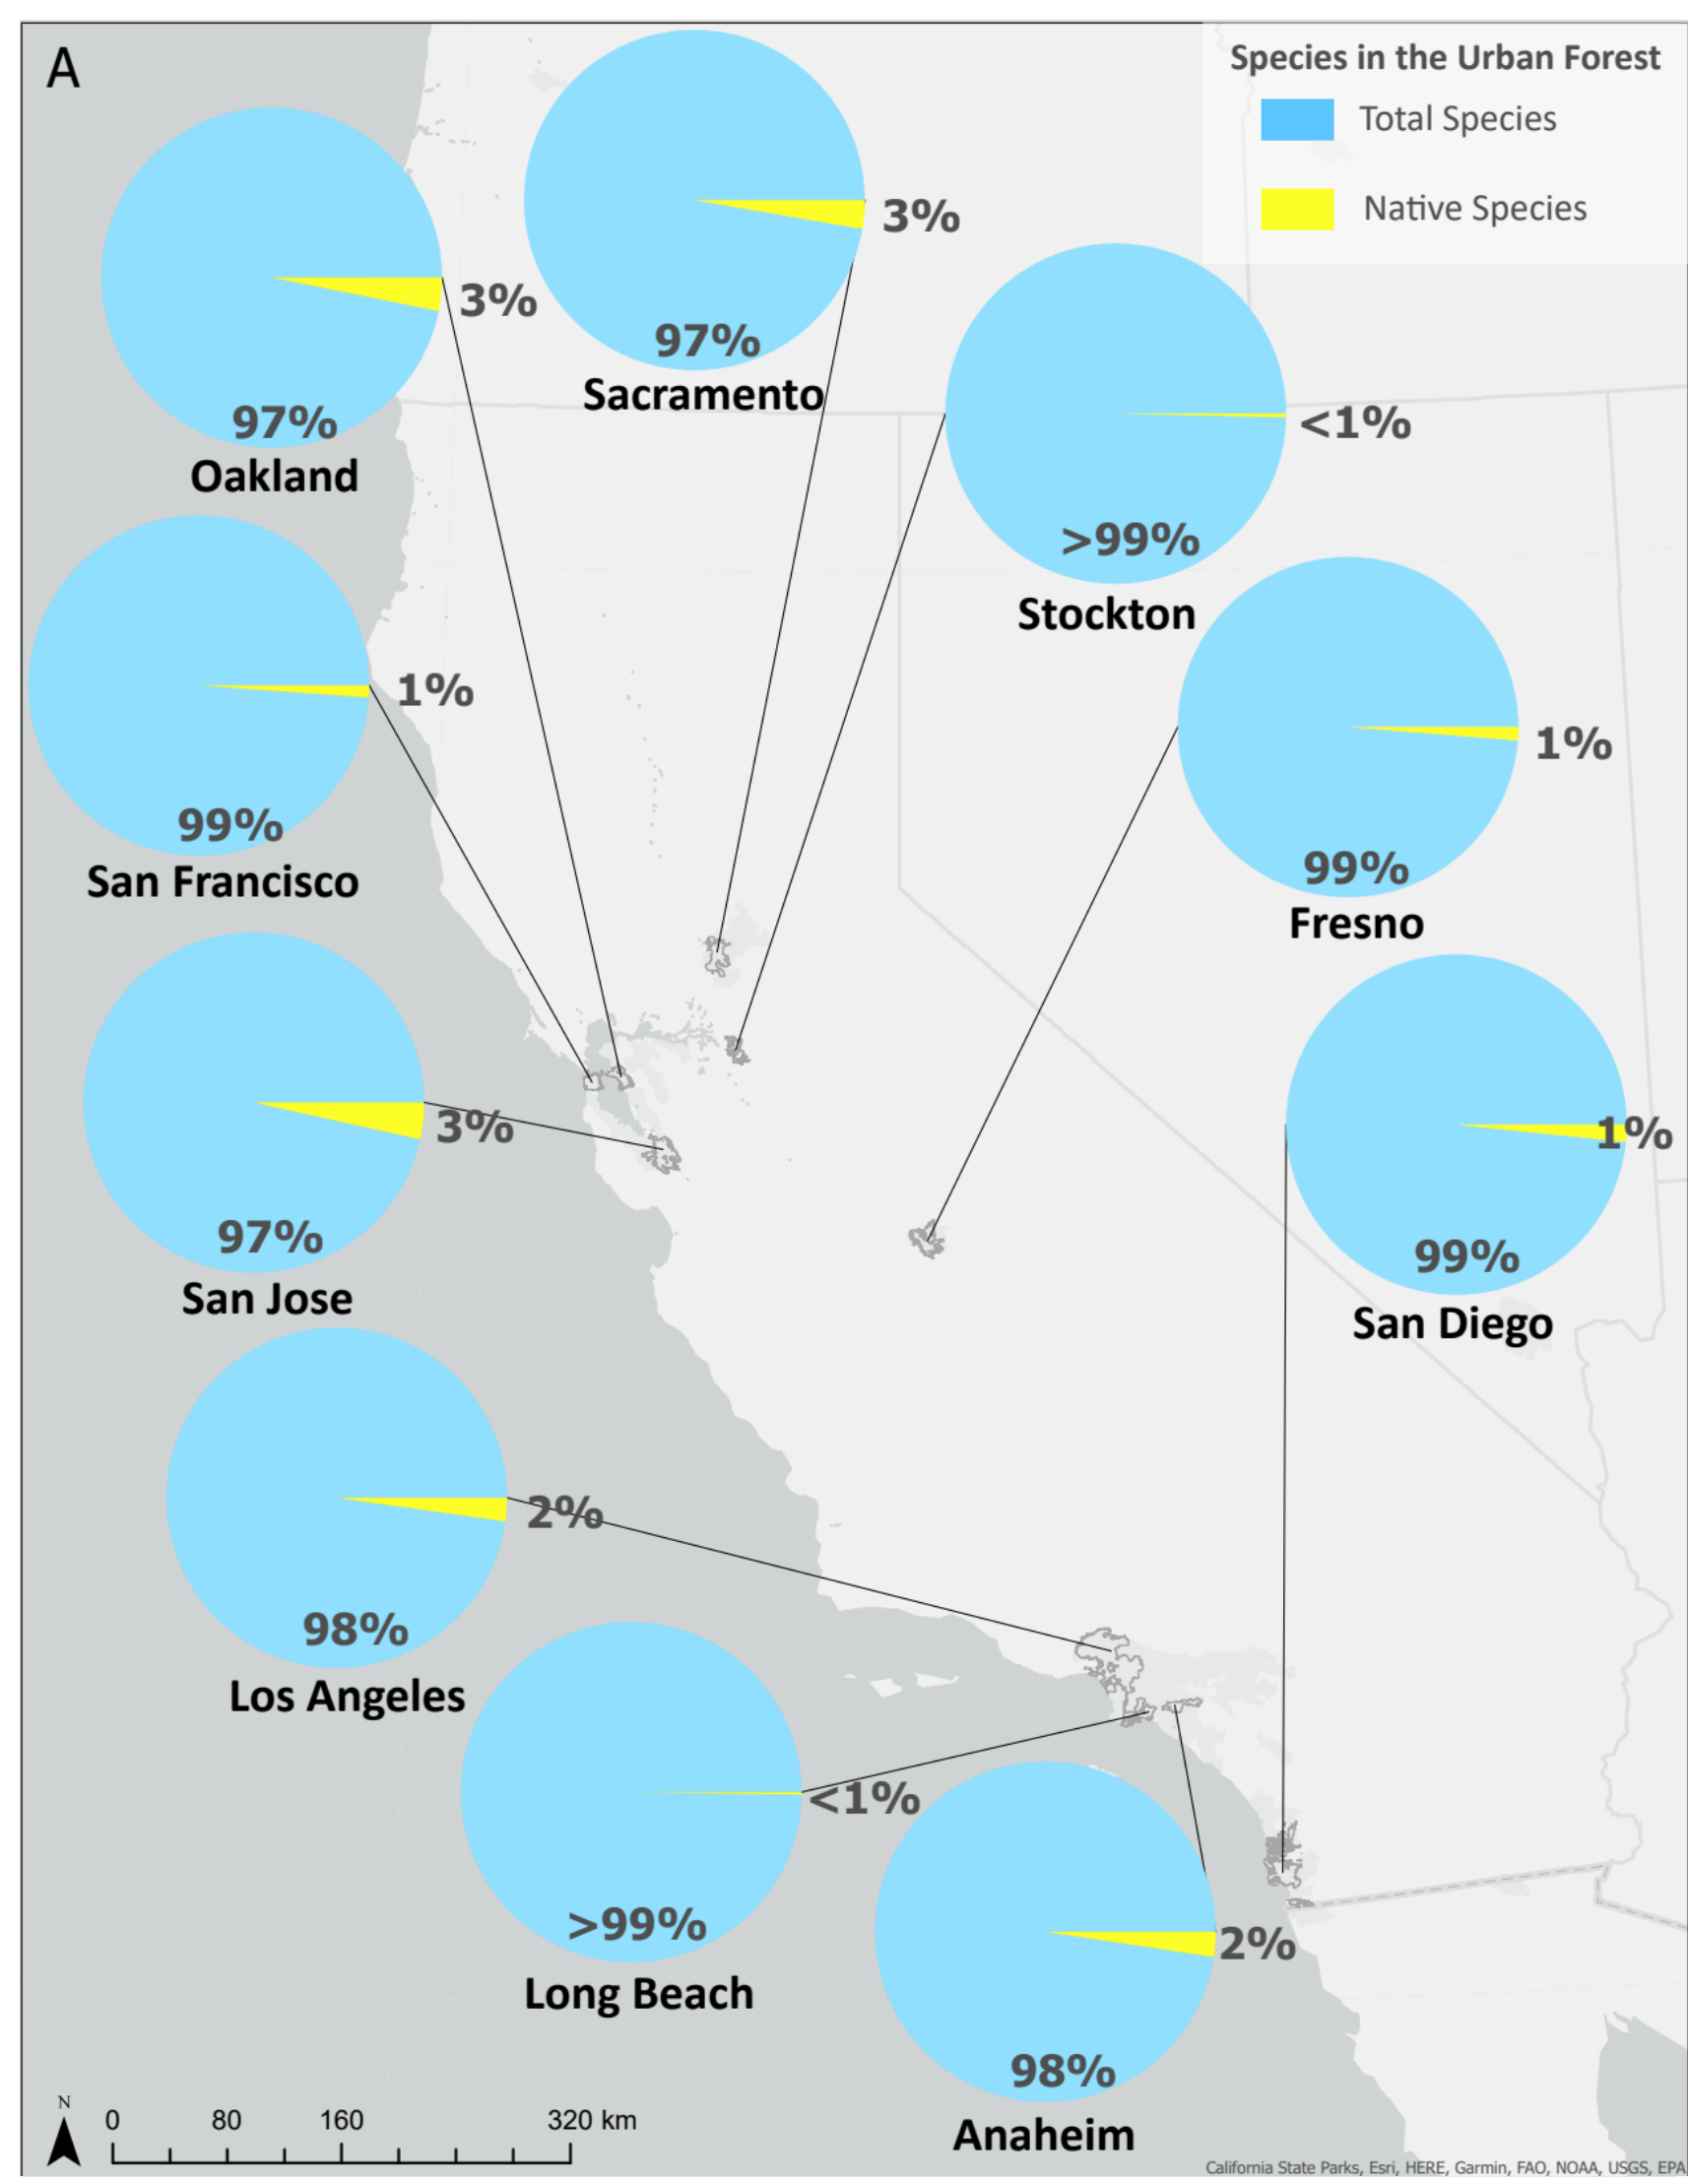

- Surrounding areas have higher numbers of native species than urban areas

RESULTS

Species

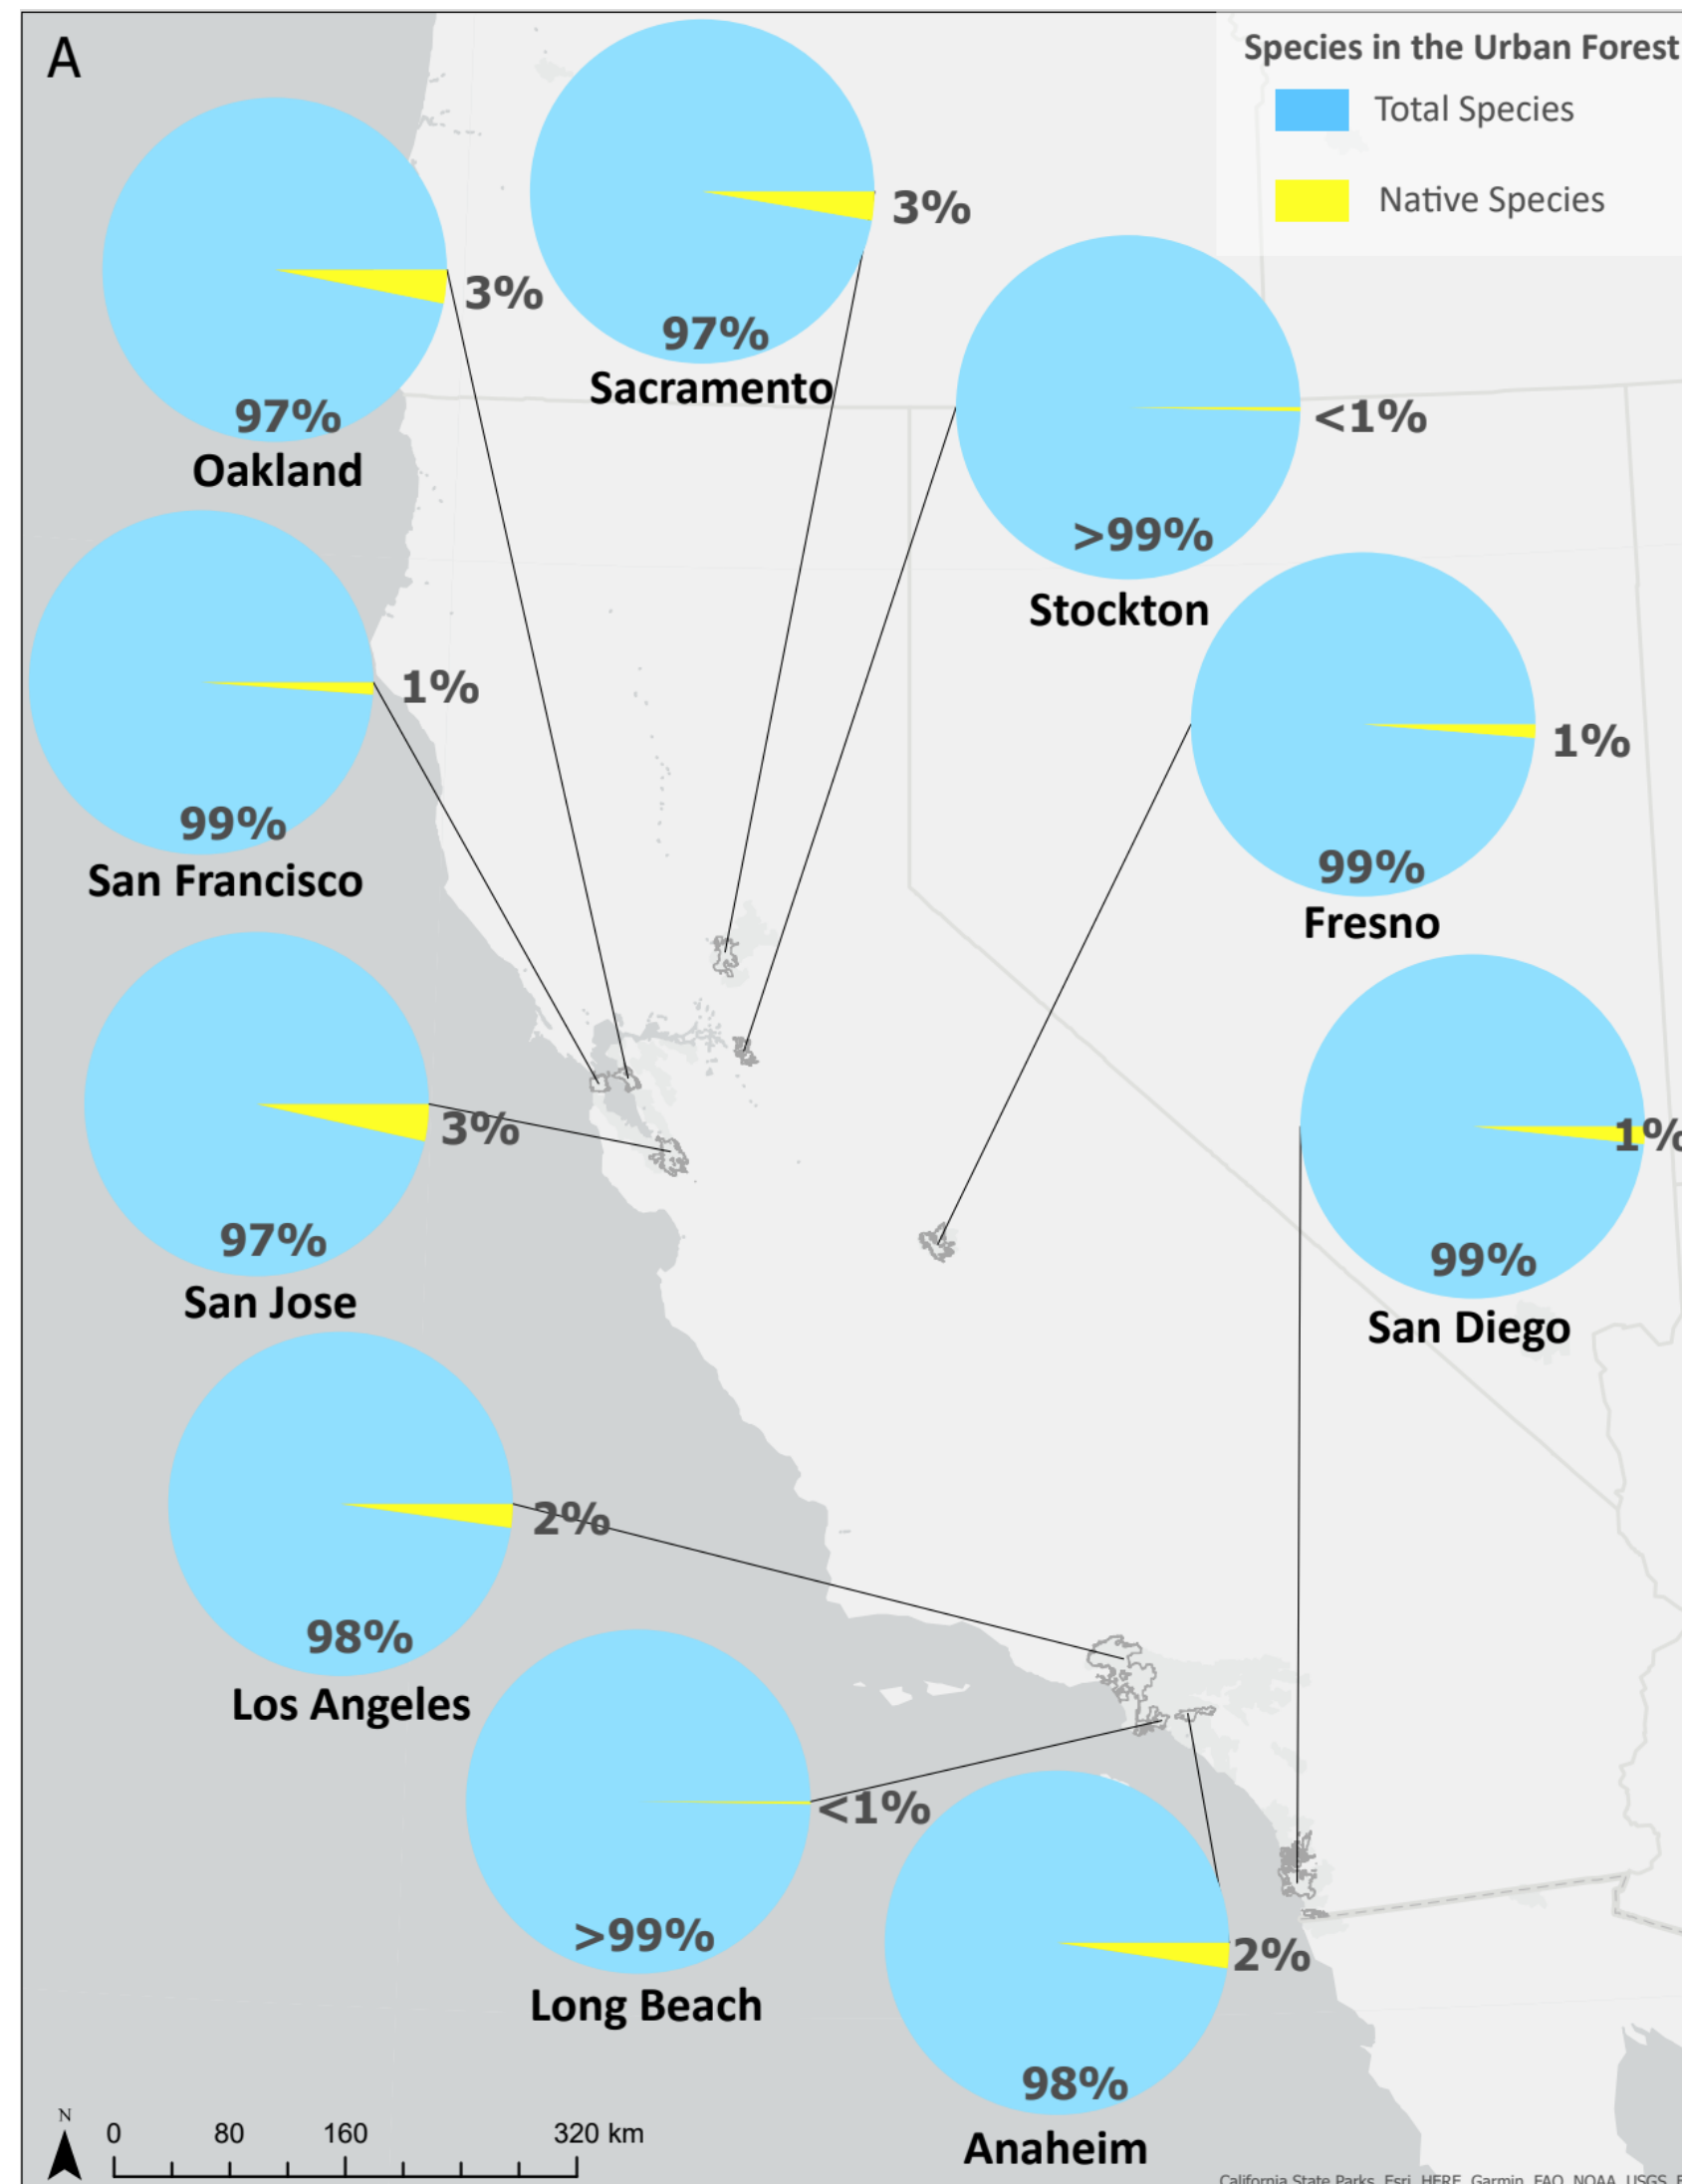

- Fewer native species than introduced

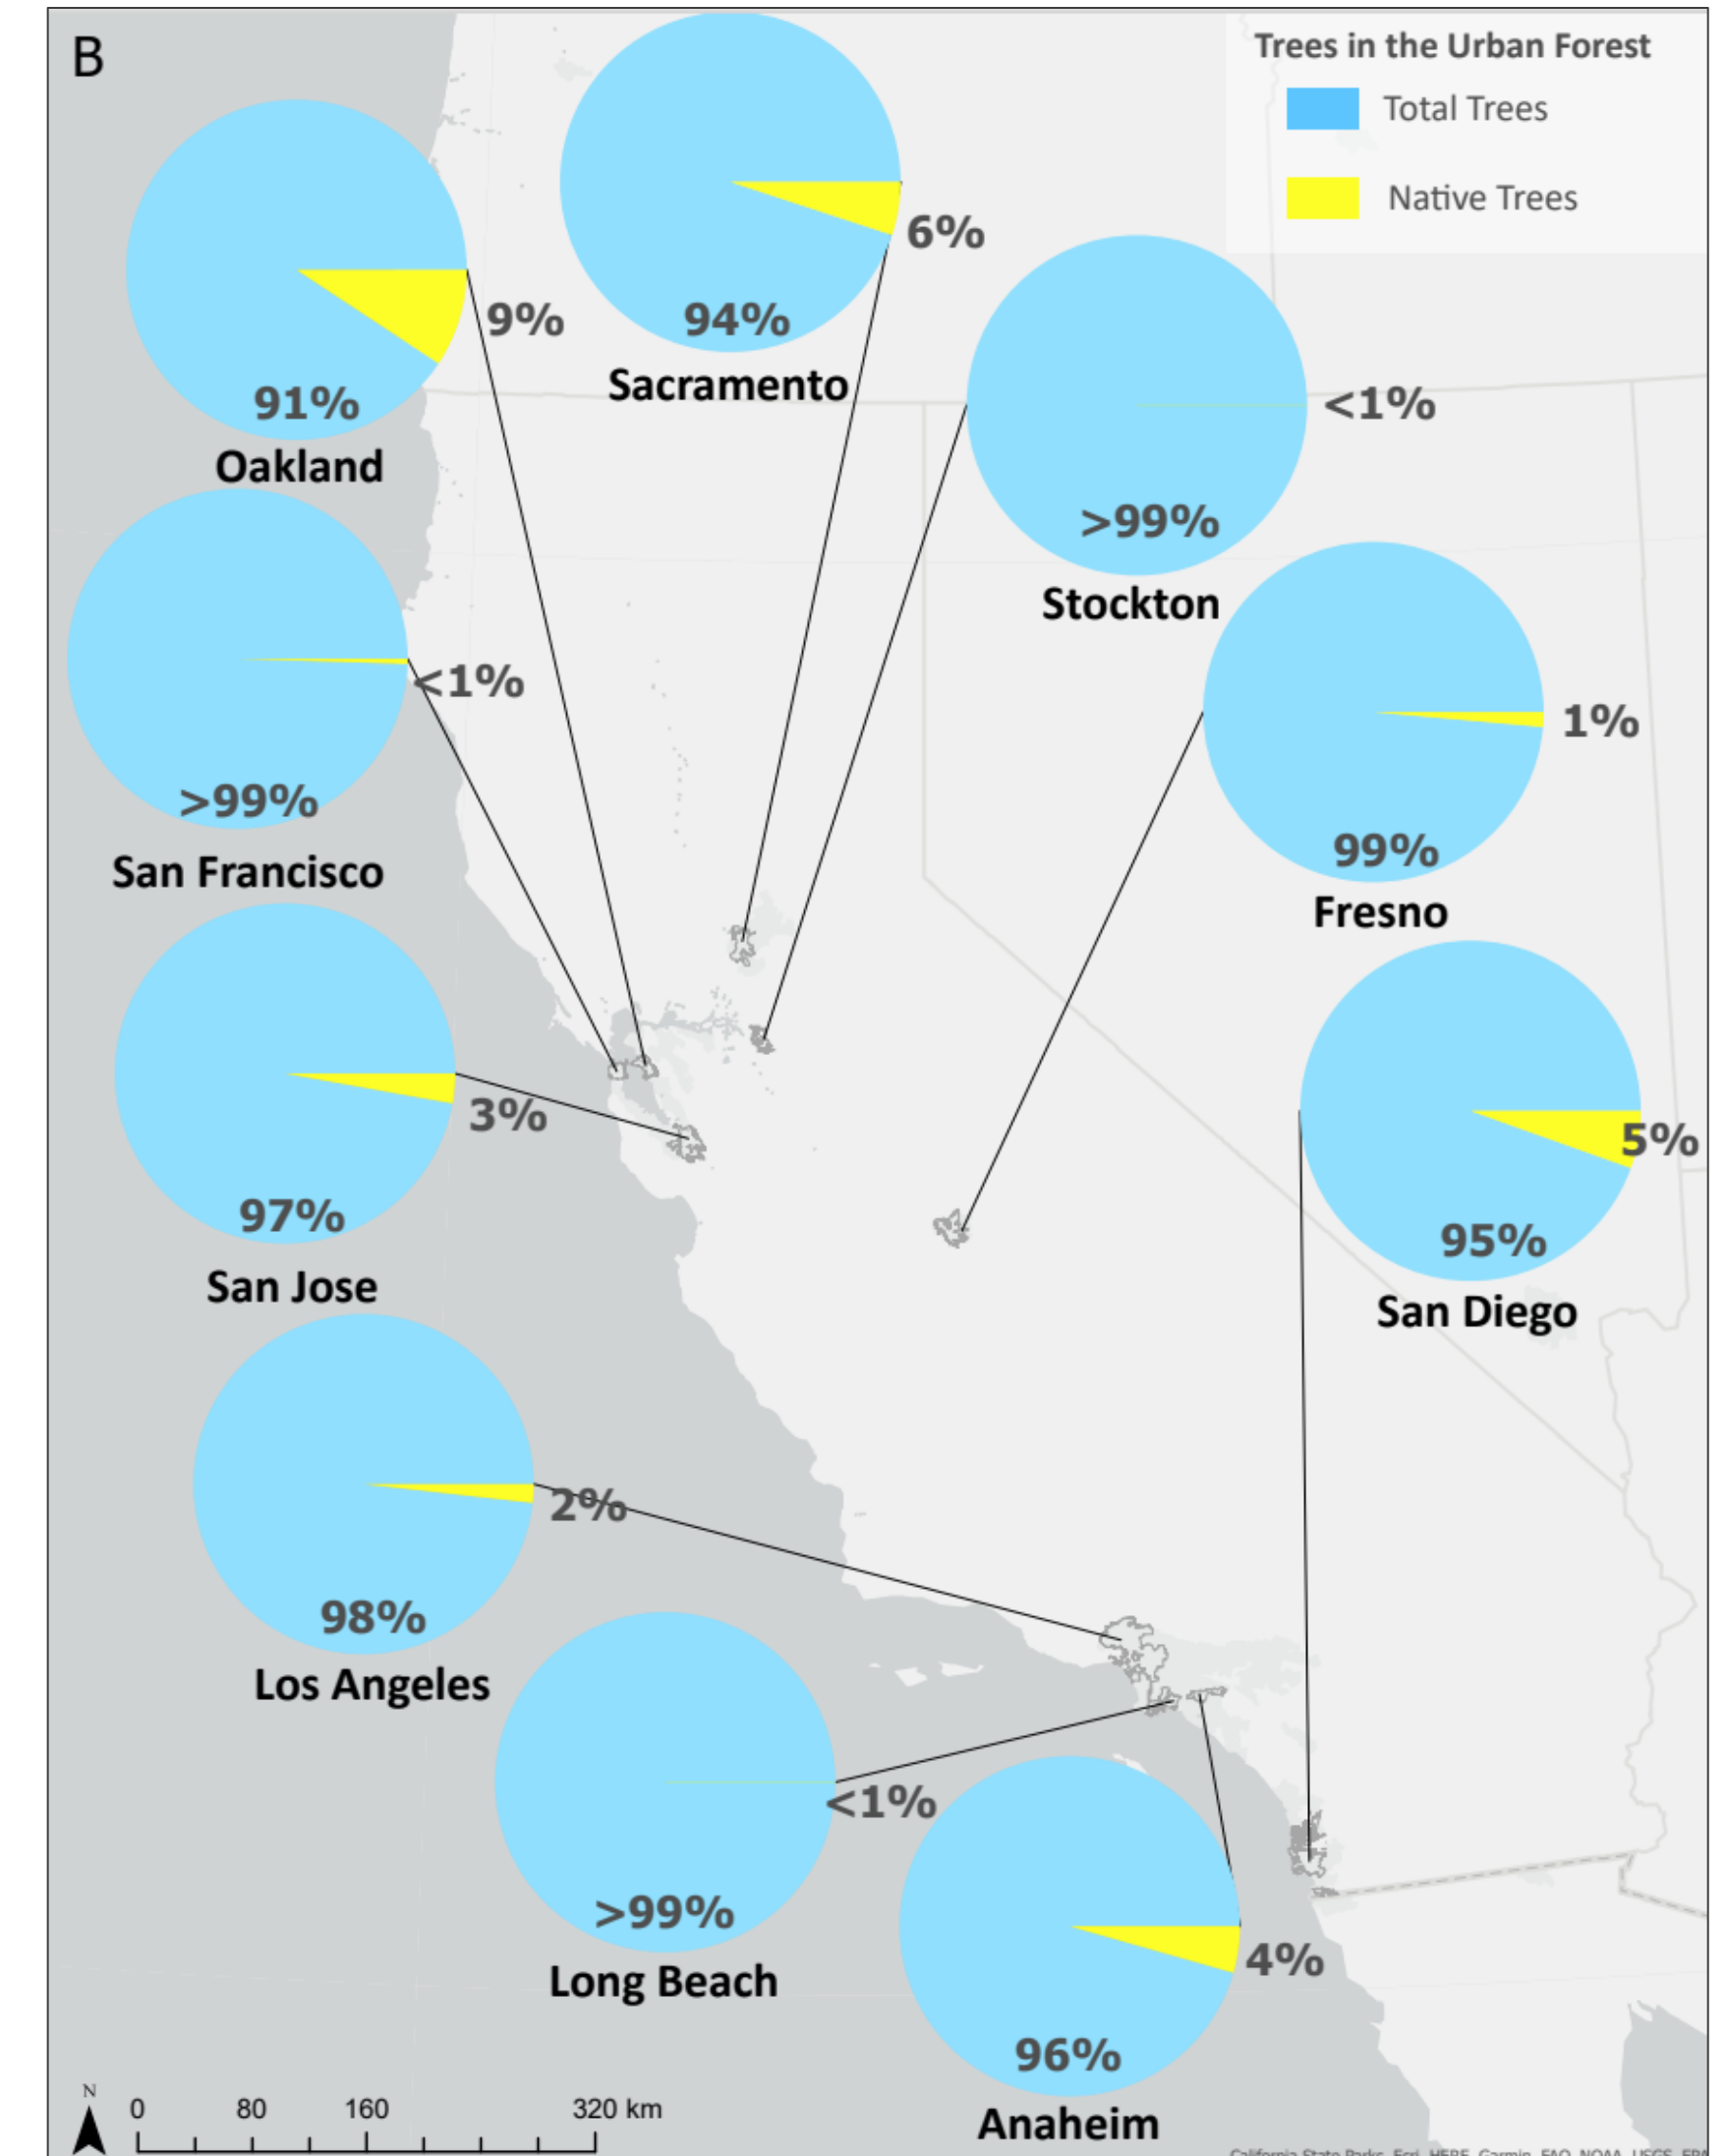

RESULTS

- Fewer native species than introduced
- Fewer native individual trees than introduced

Species

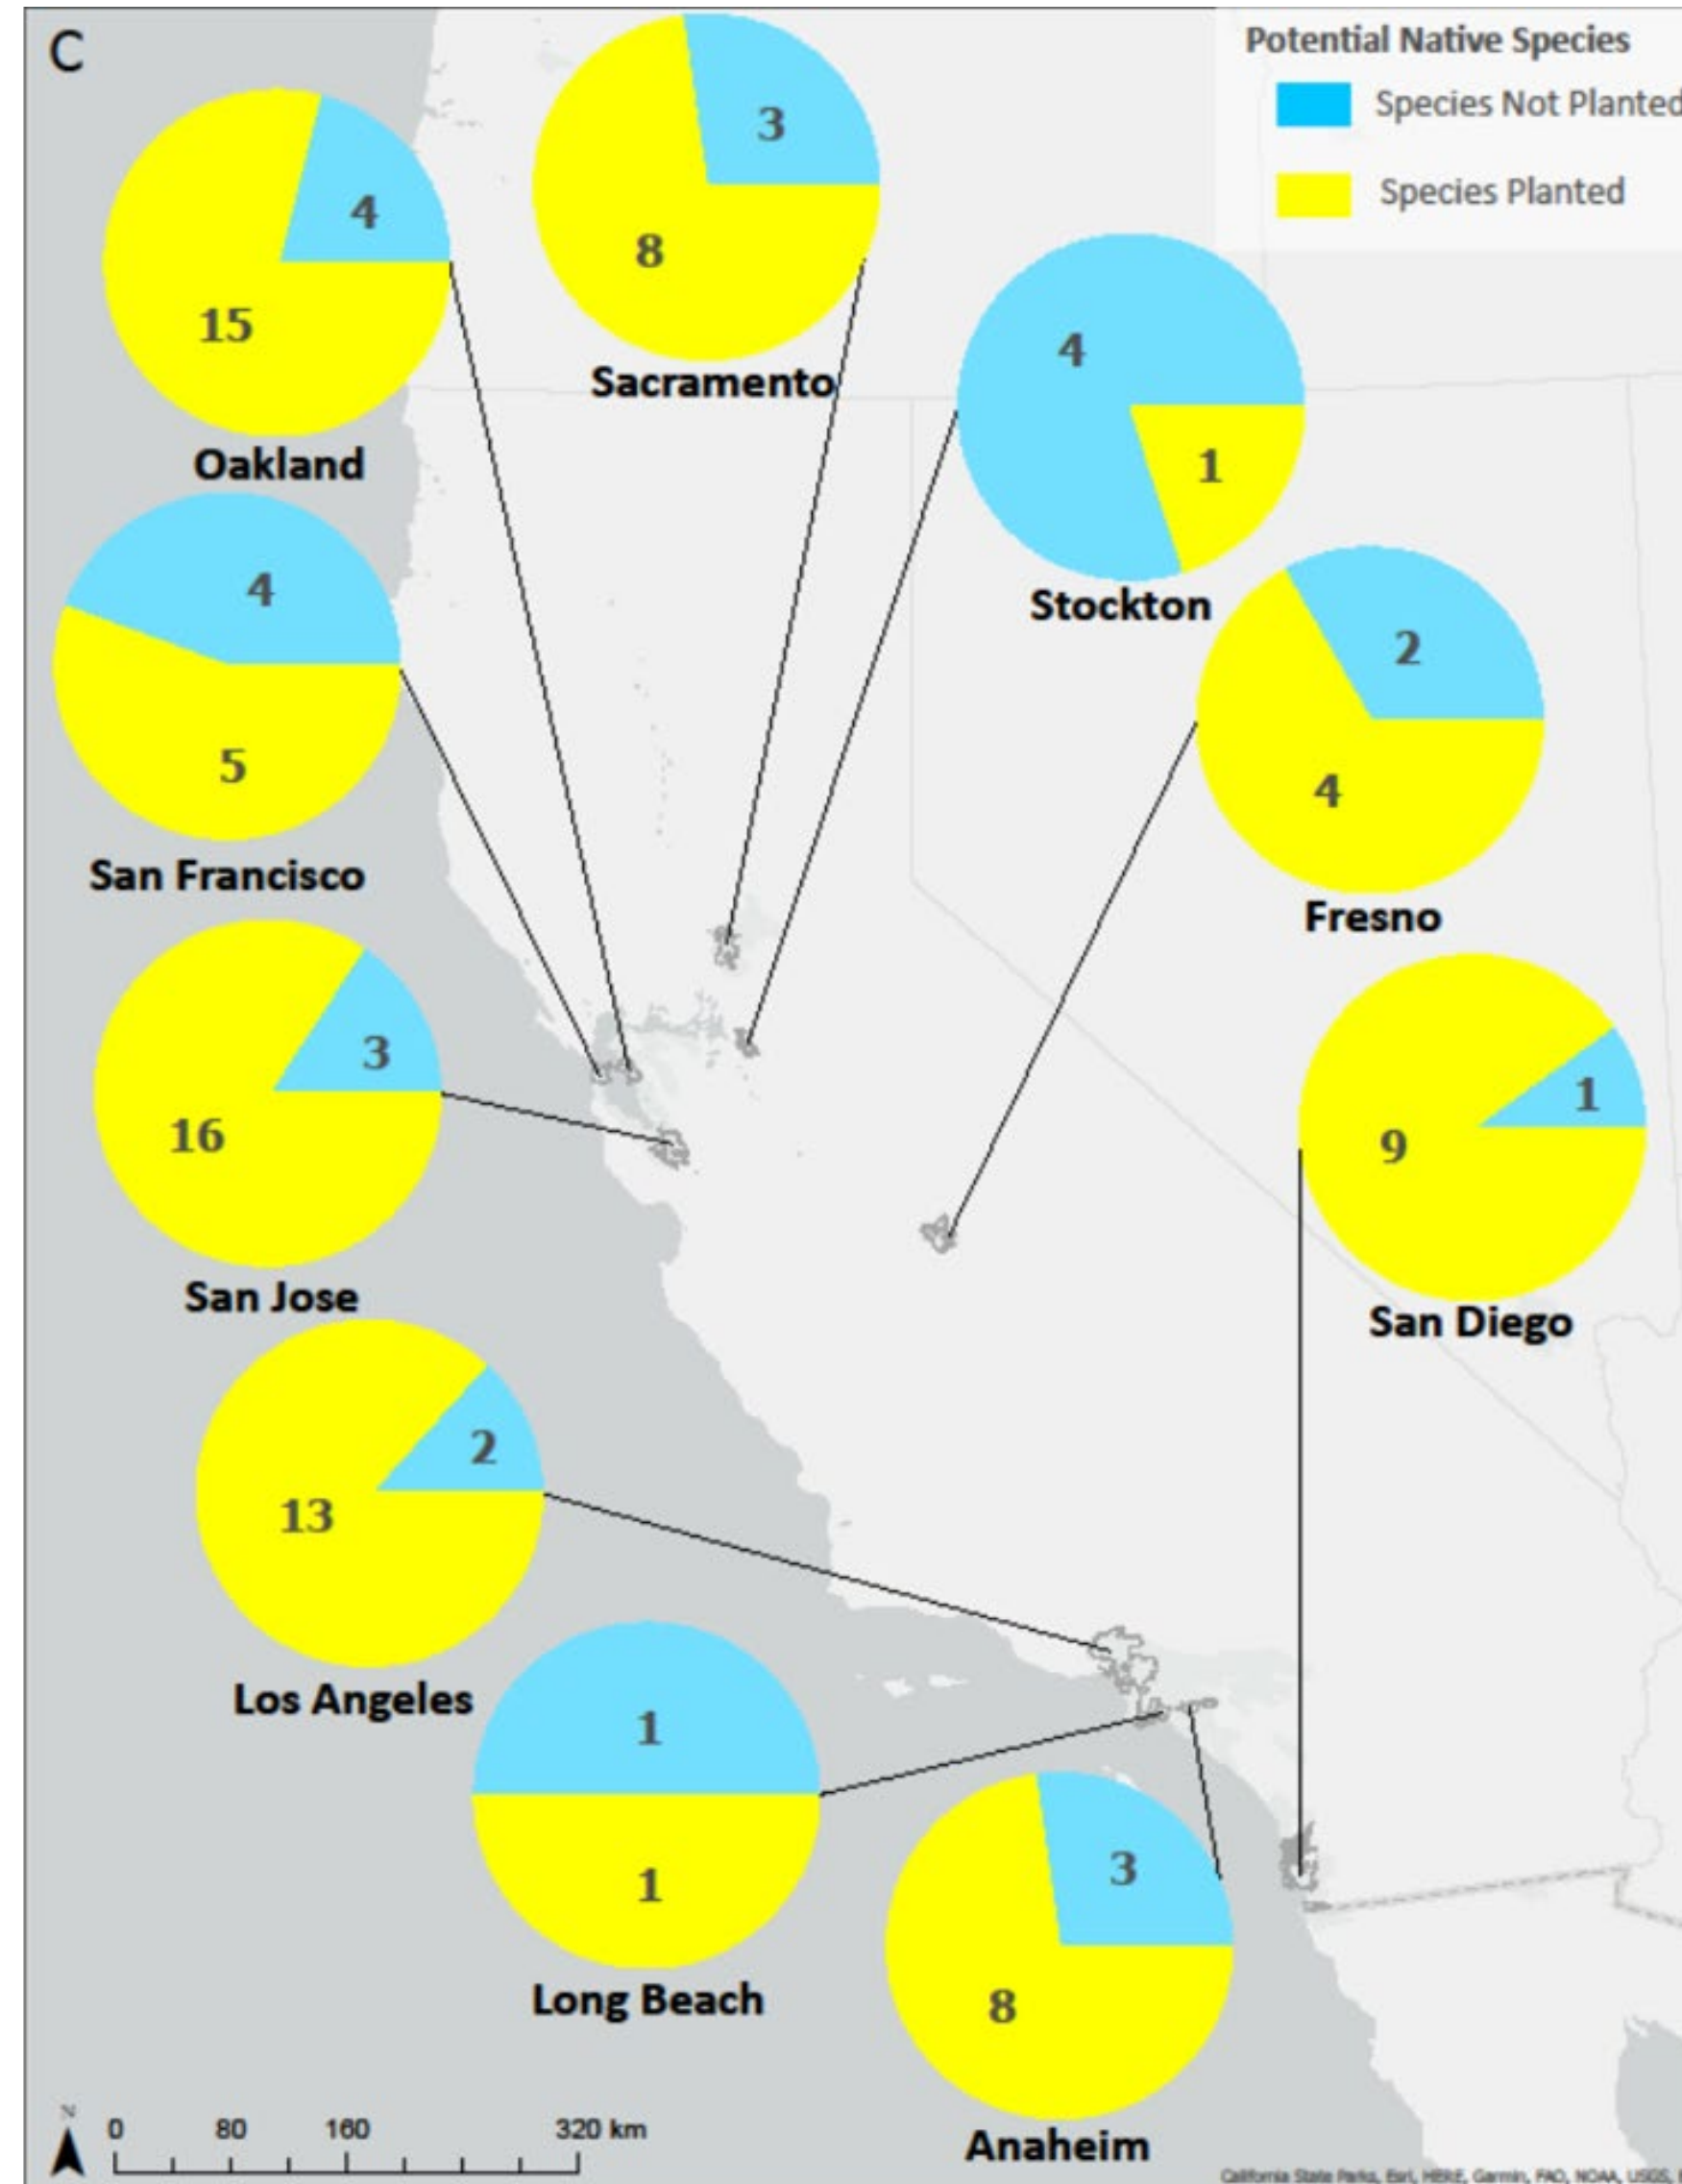

Individual Trees

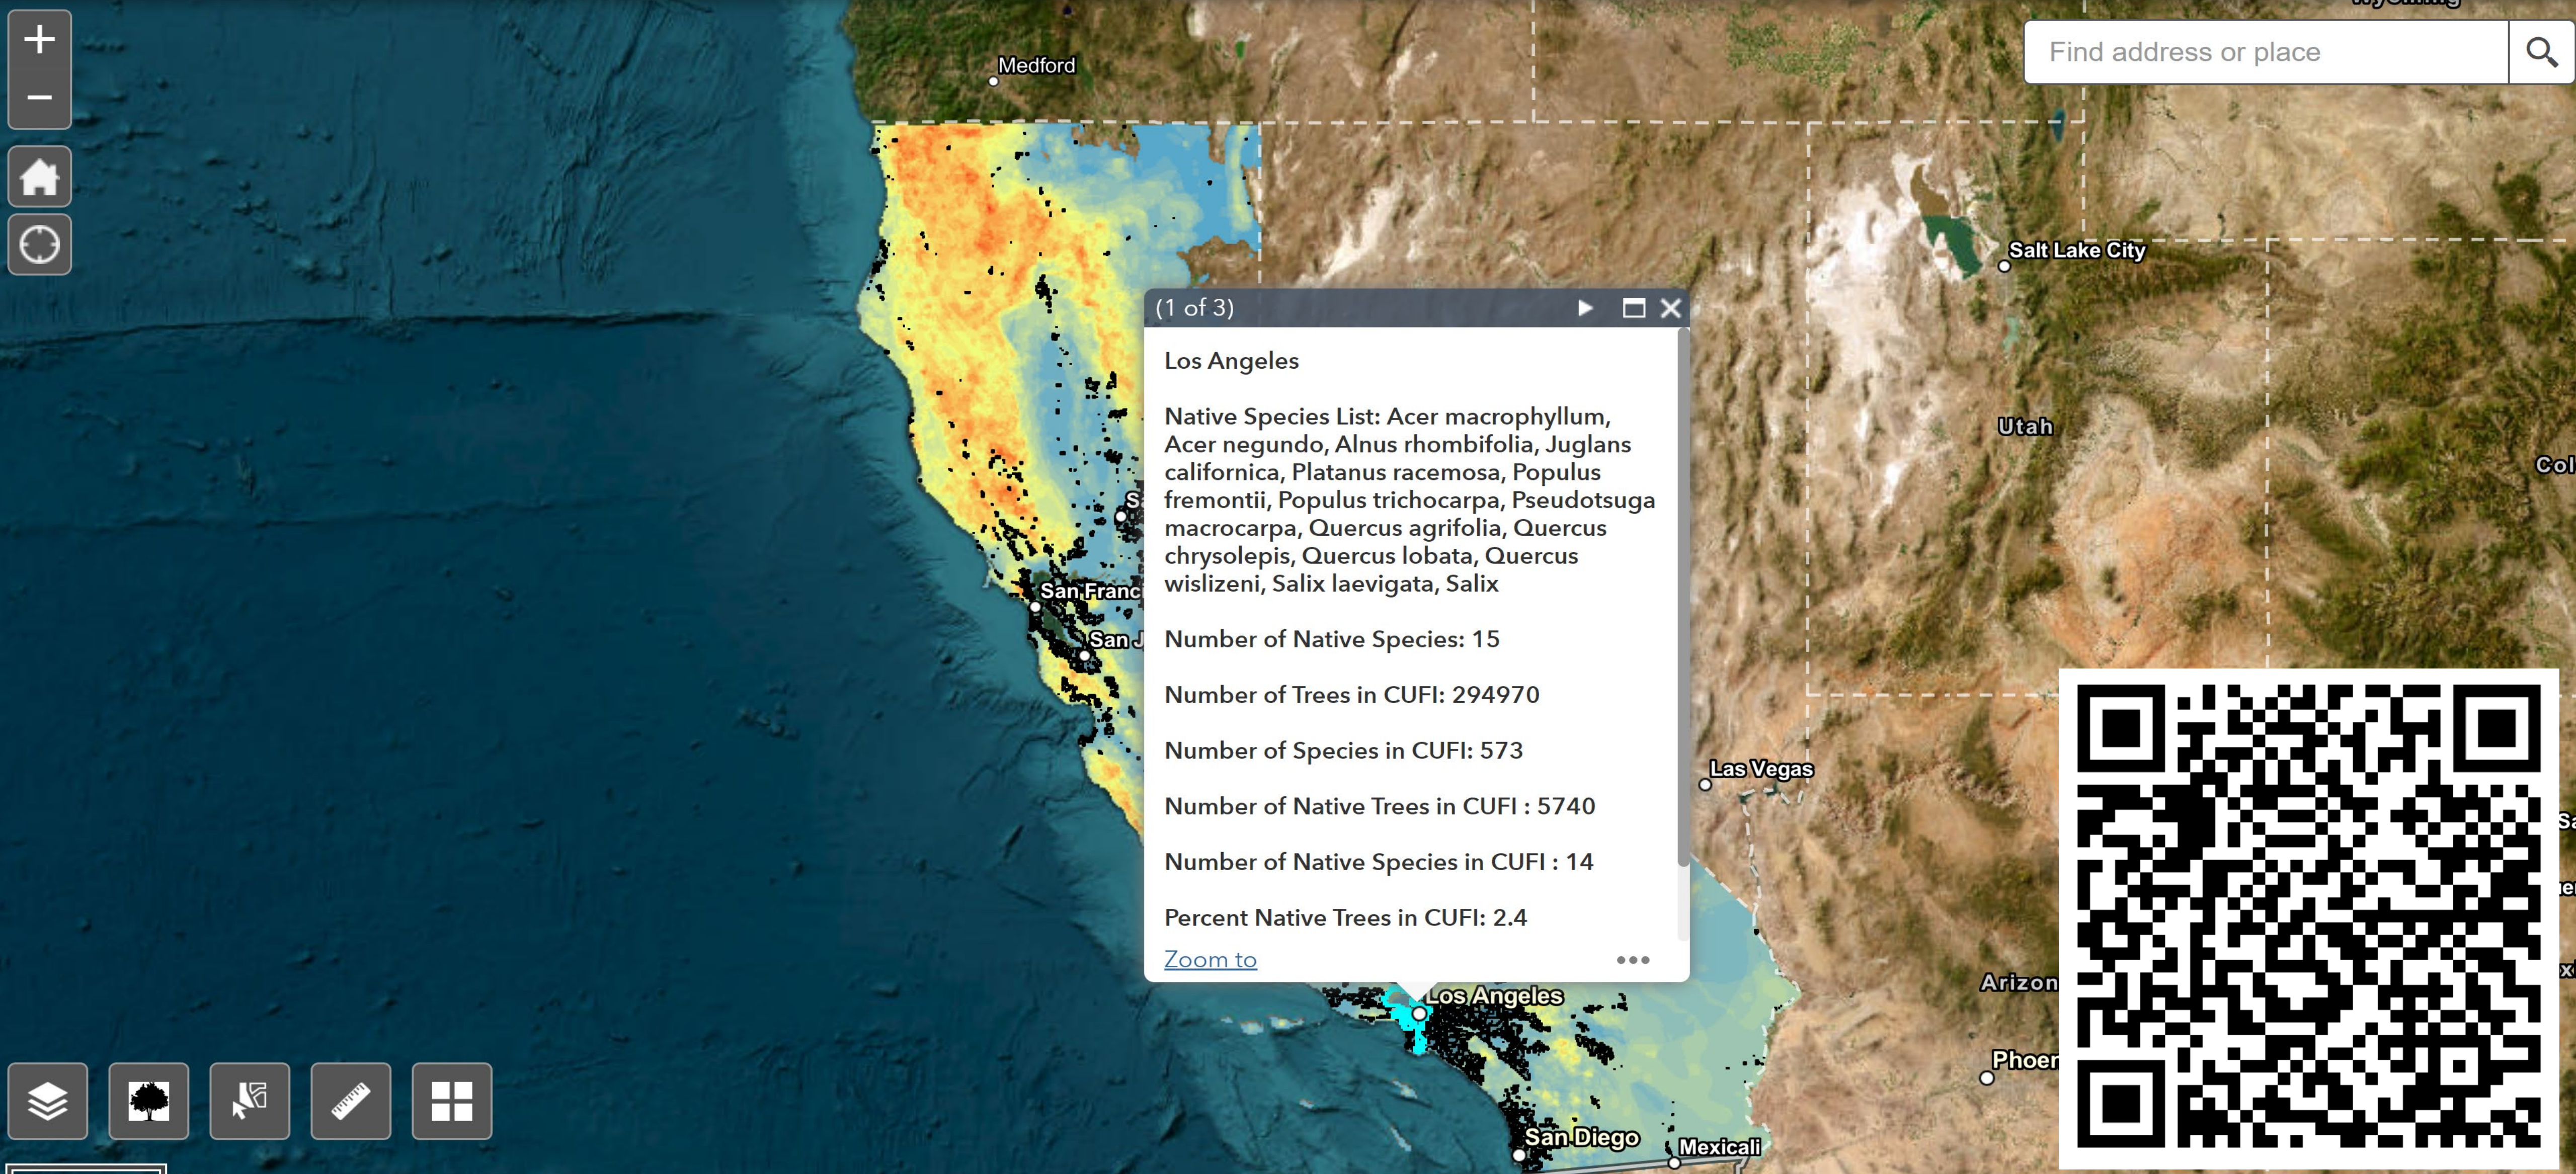

RESULTS

- Few native trees that are not currently planted in urban environments

ACCESS

Planning for resilient urban forests: A data-driven approach to assessing urban tree species suitability in California

Modeling climate suitability of California's urban tree species

- 114 most common urban tree species

Occurrence data
in native range

Climate data
8 variables

Atlas cedar
Cedrus atlantica

RESULTS

Atlas cedar is climatically well-suited for Inland Valleys and Interior West under current climate conditions

Current Suitability

Climate Zone	Percent Overlap
Inland Empire	3%
Inland Valleys	81%
Interior West	93%
Northern California	27%
Southern California Coast	<1%
Southwest Desert	15%

RESULTS

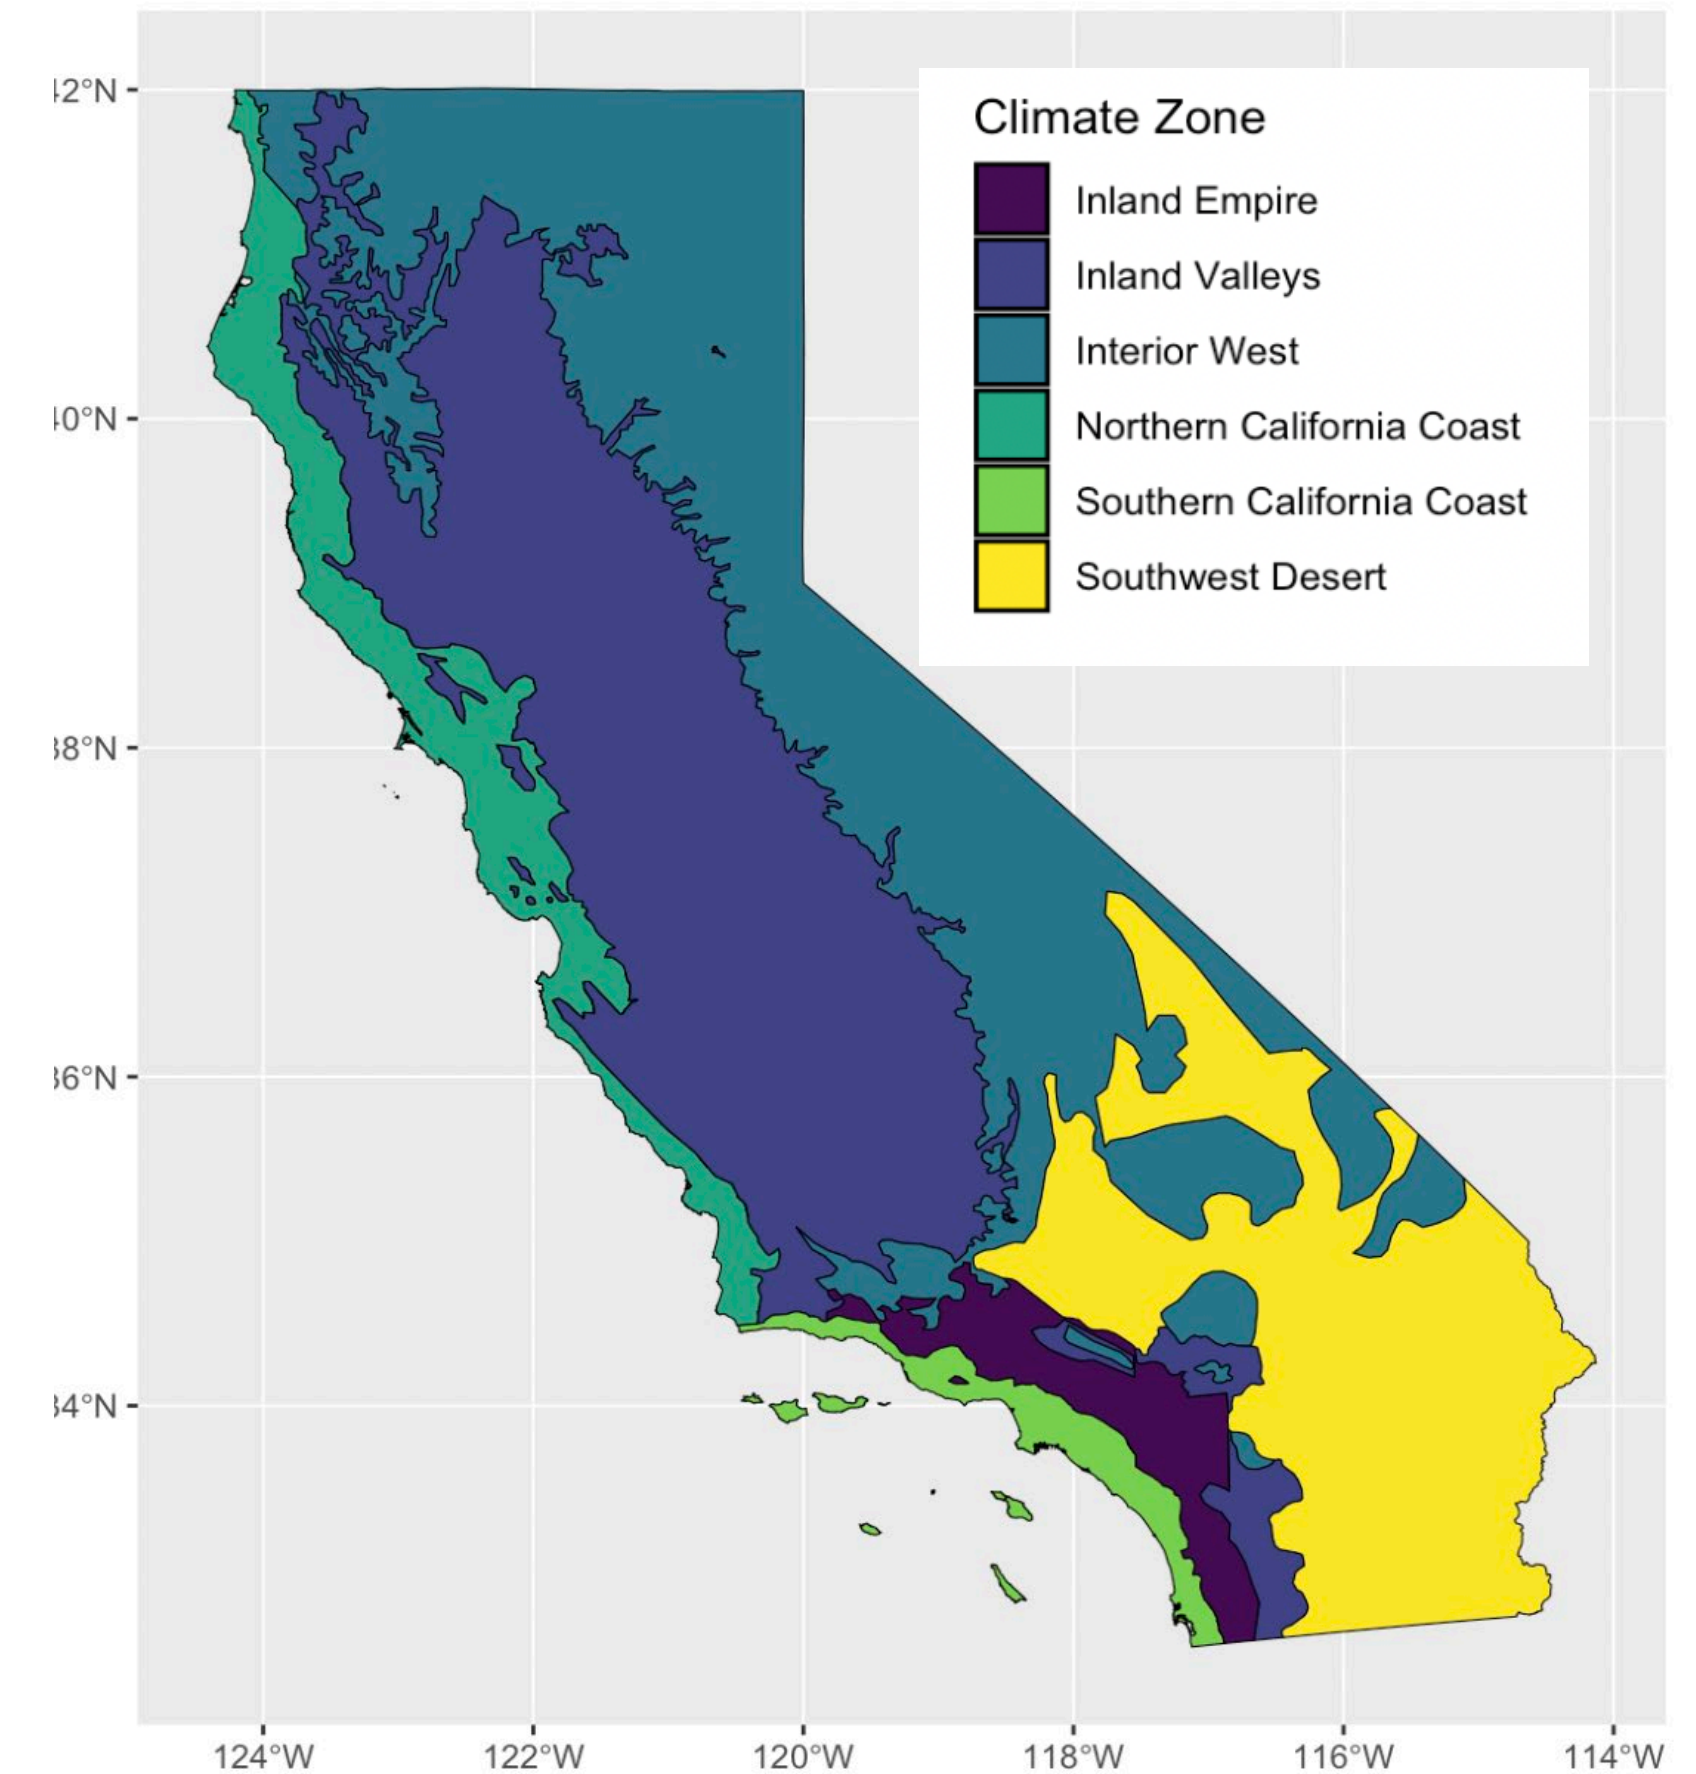

Atlas cedar is climatically well-suited for Inland Valleys and Interior West under current climate conditions

Current Suitability

Climate Zone	Percent Overlap
Inland Empire	3%
Inland Valleys	81%
Interior West	93%
Northern California	27%
Southern California Coast	<1%
Southwest Desert	15%

2041-2070 Suitability

Climate Zone	Percent Overlap
Inland Empire	<1%
Inland Valleys	20%
Interior West	28%
Northern California	51%
Southern California Coast	<1%
Southwest Desert	<1%

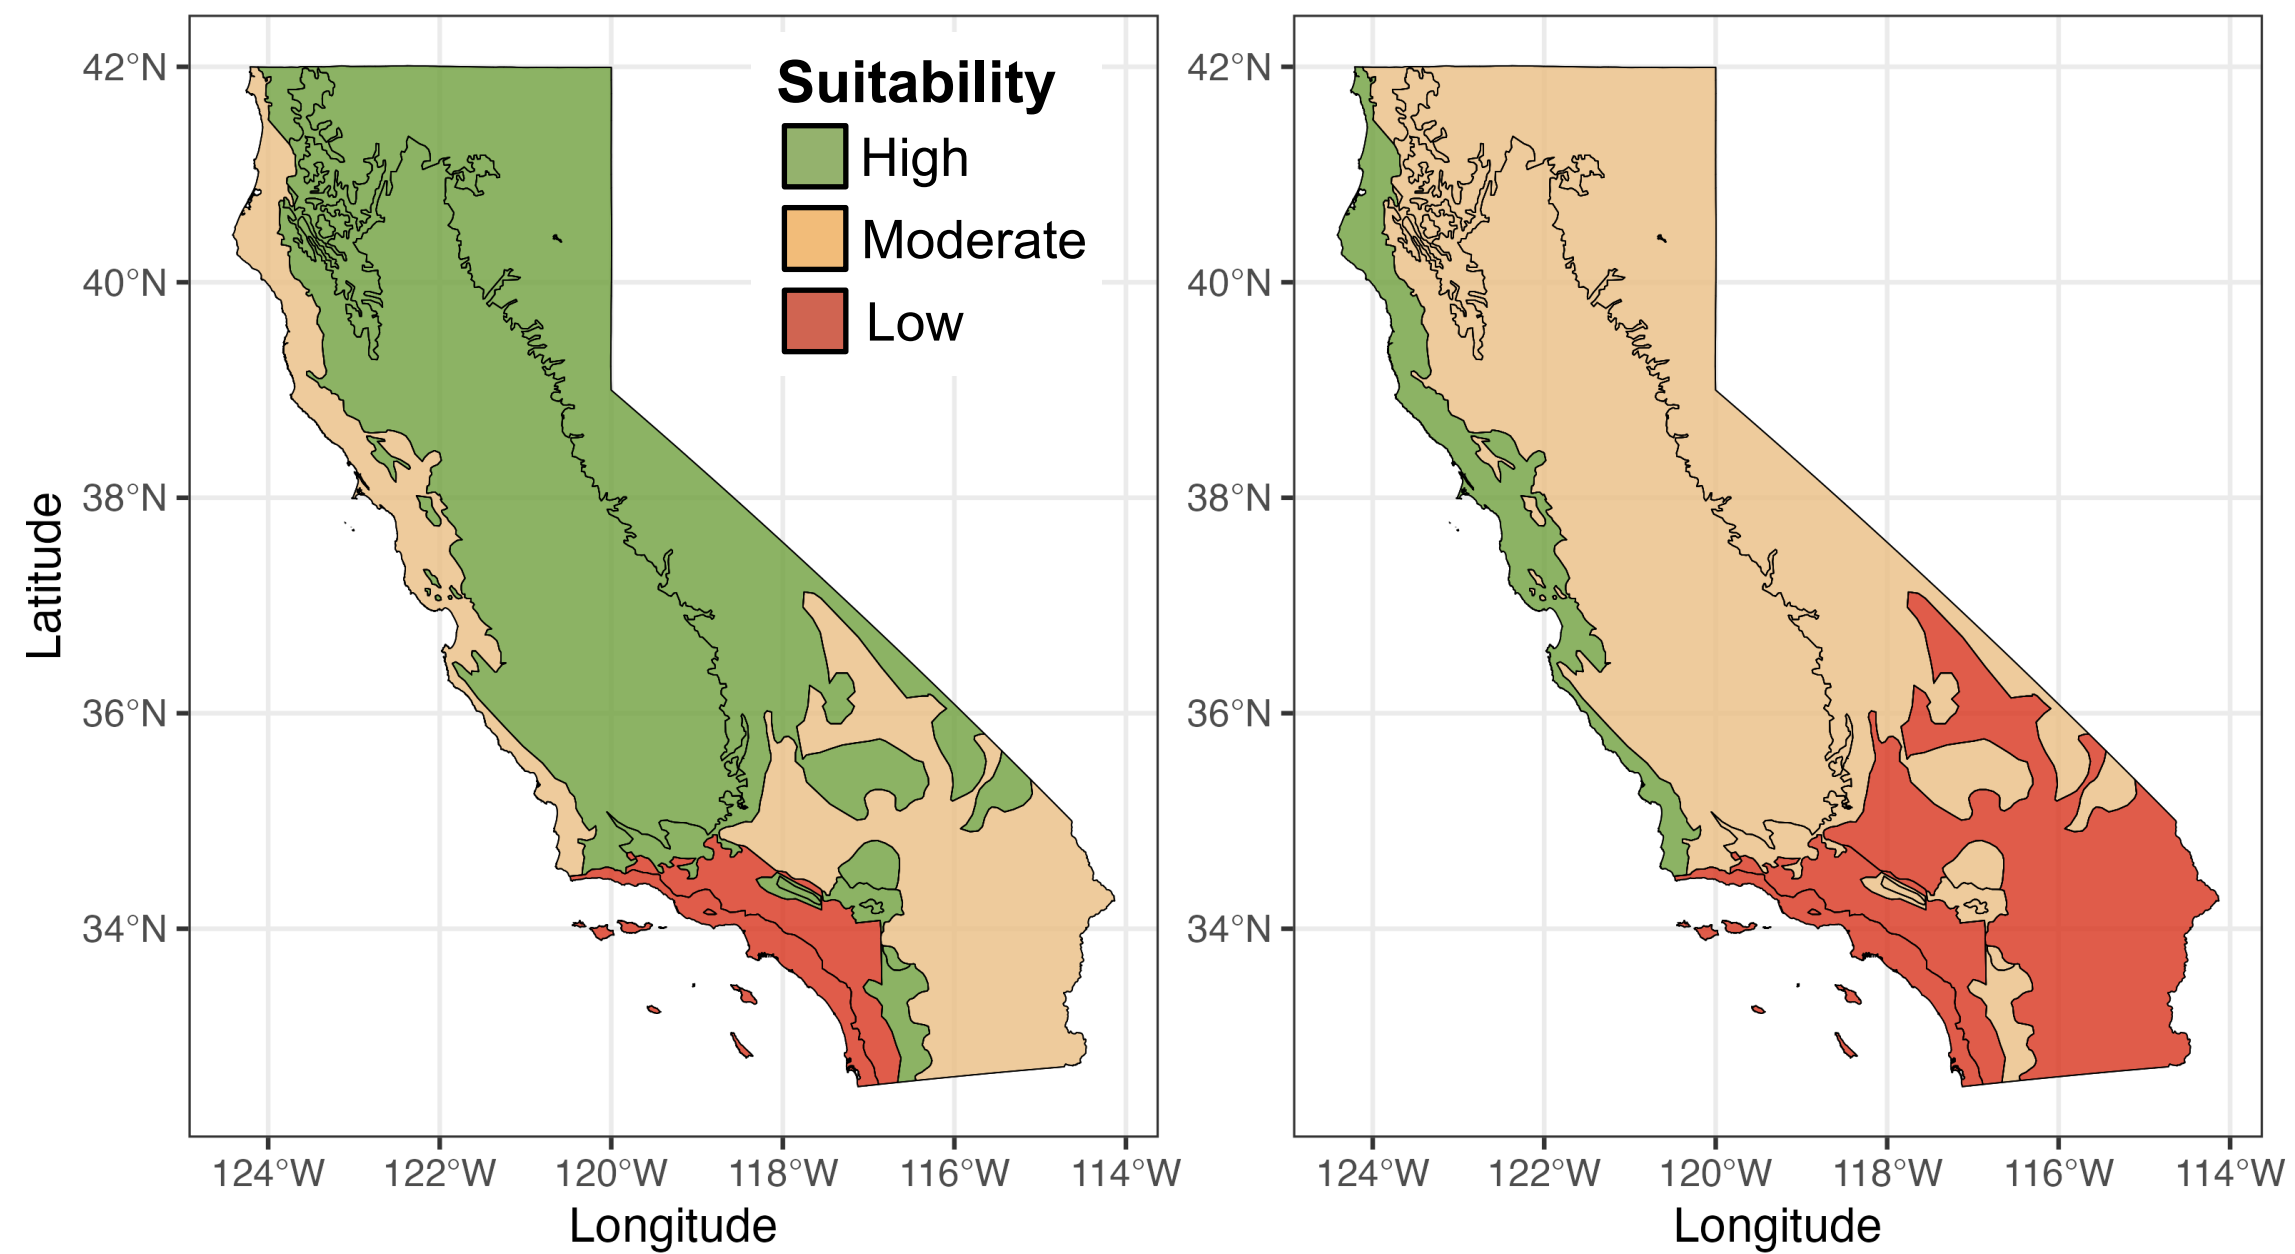

Atlas Cedar (*Cedrus atlantica*)

Current

2041-2070

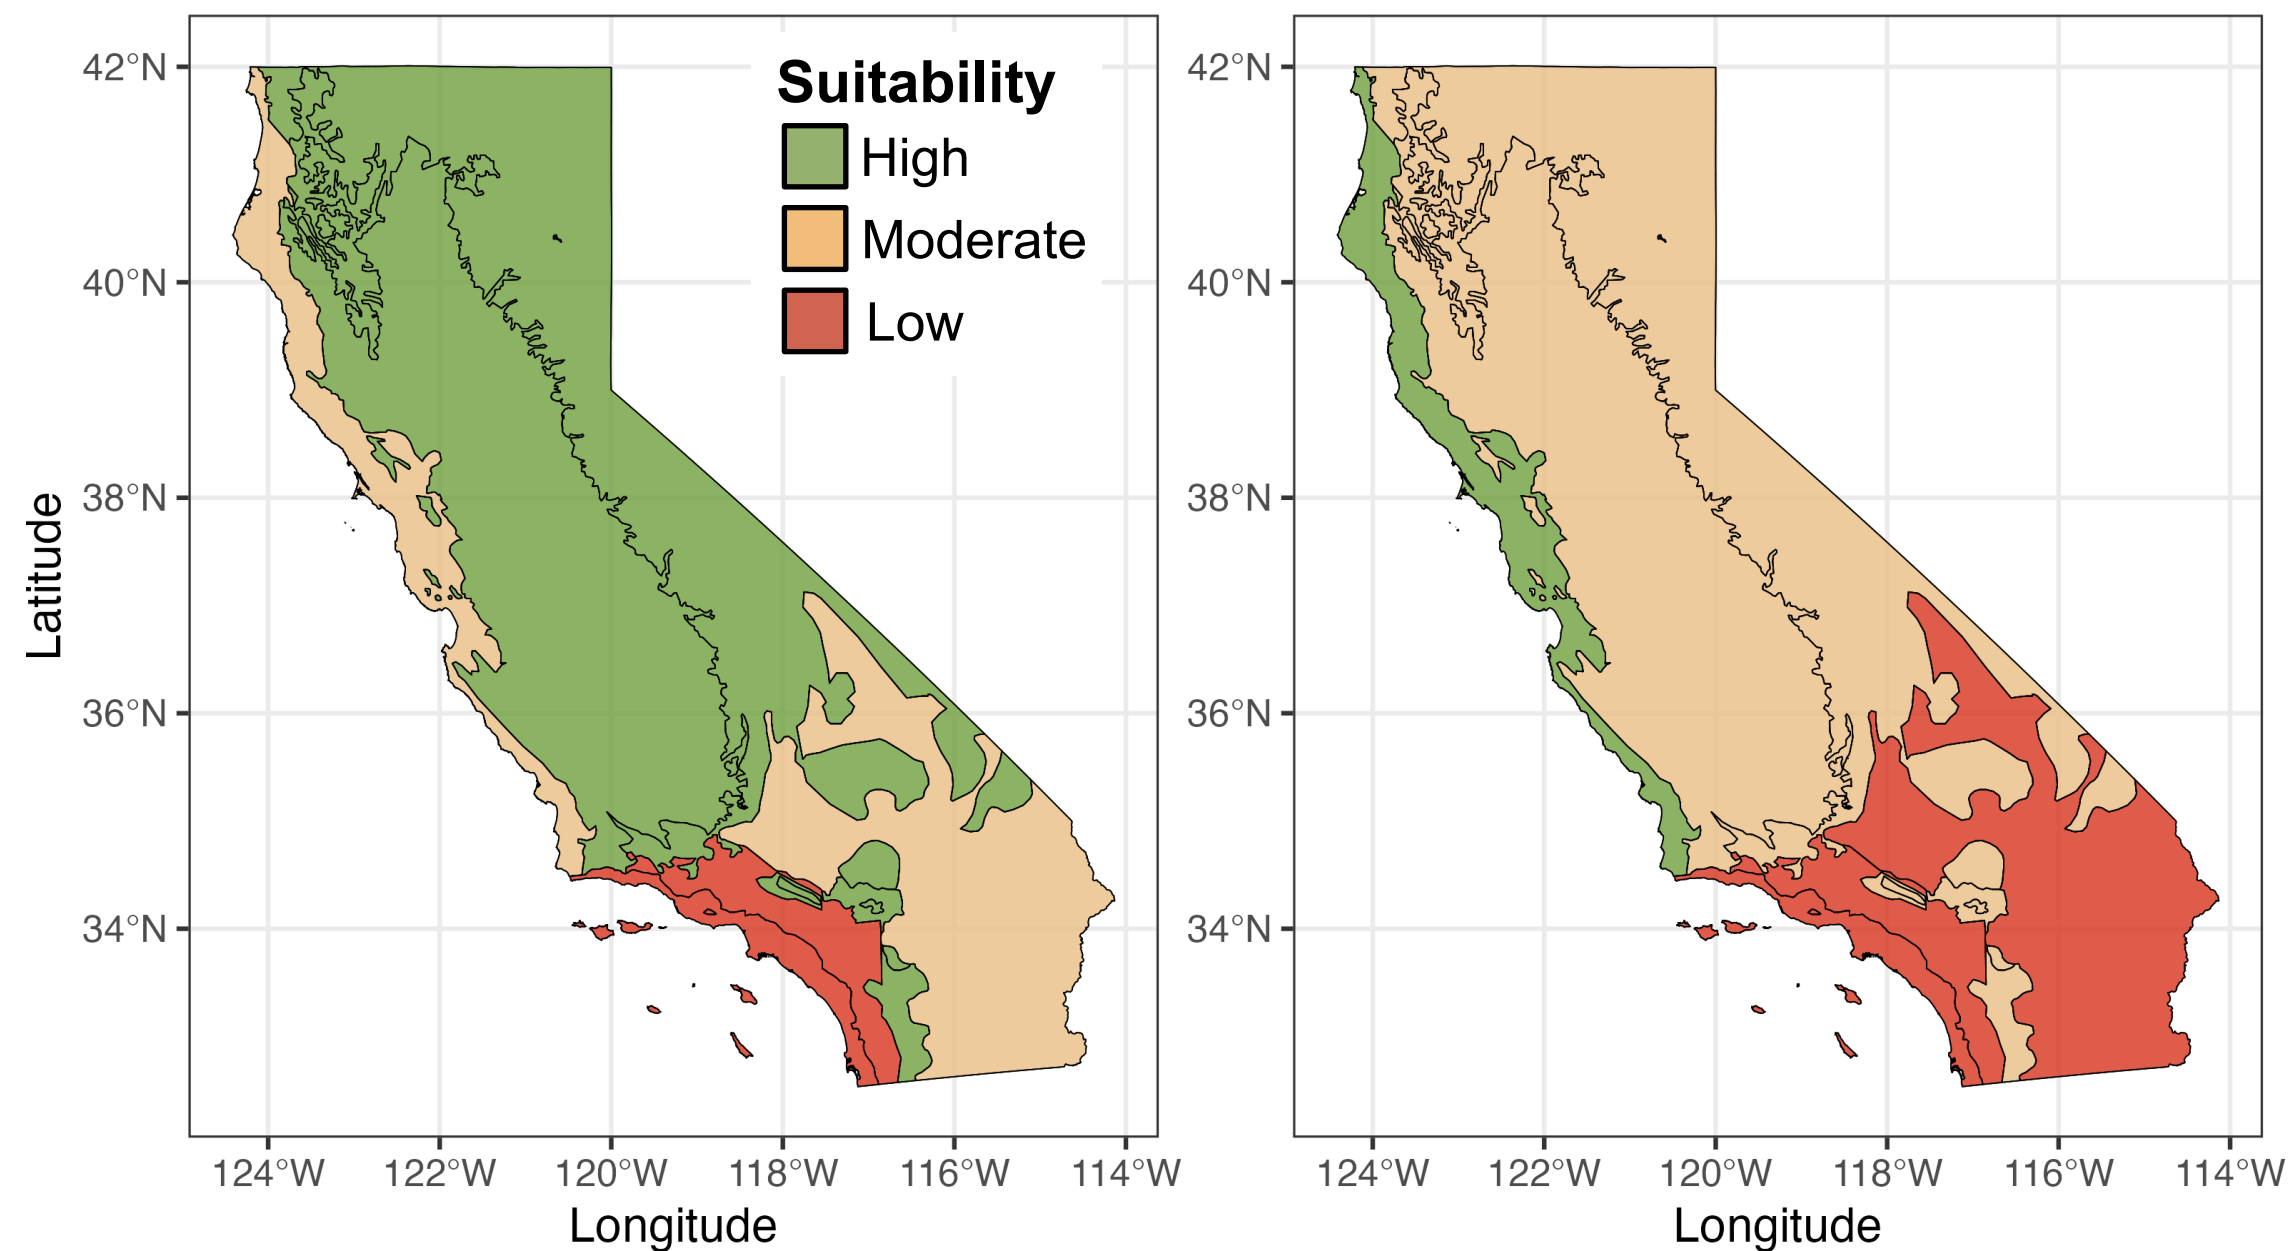

RESULTS

Atlas Cedar (*Cedrus atlantica*)

Current

2041-2070

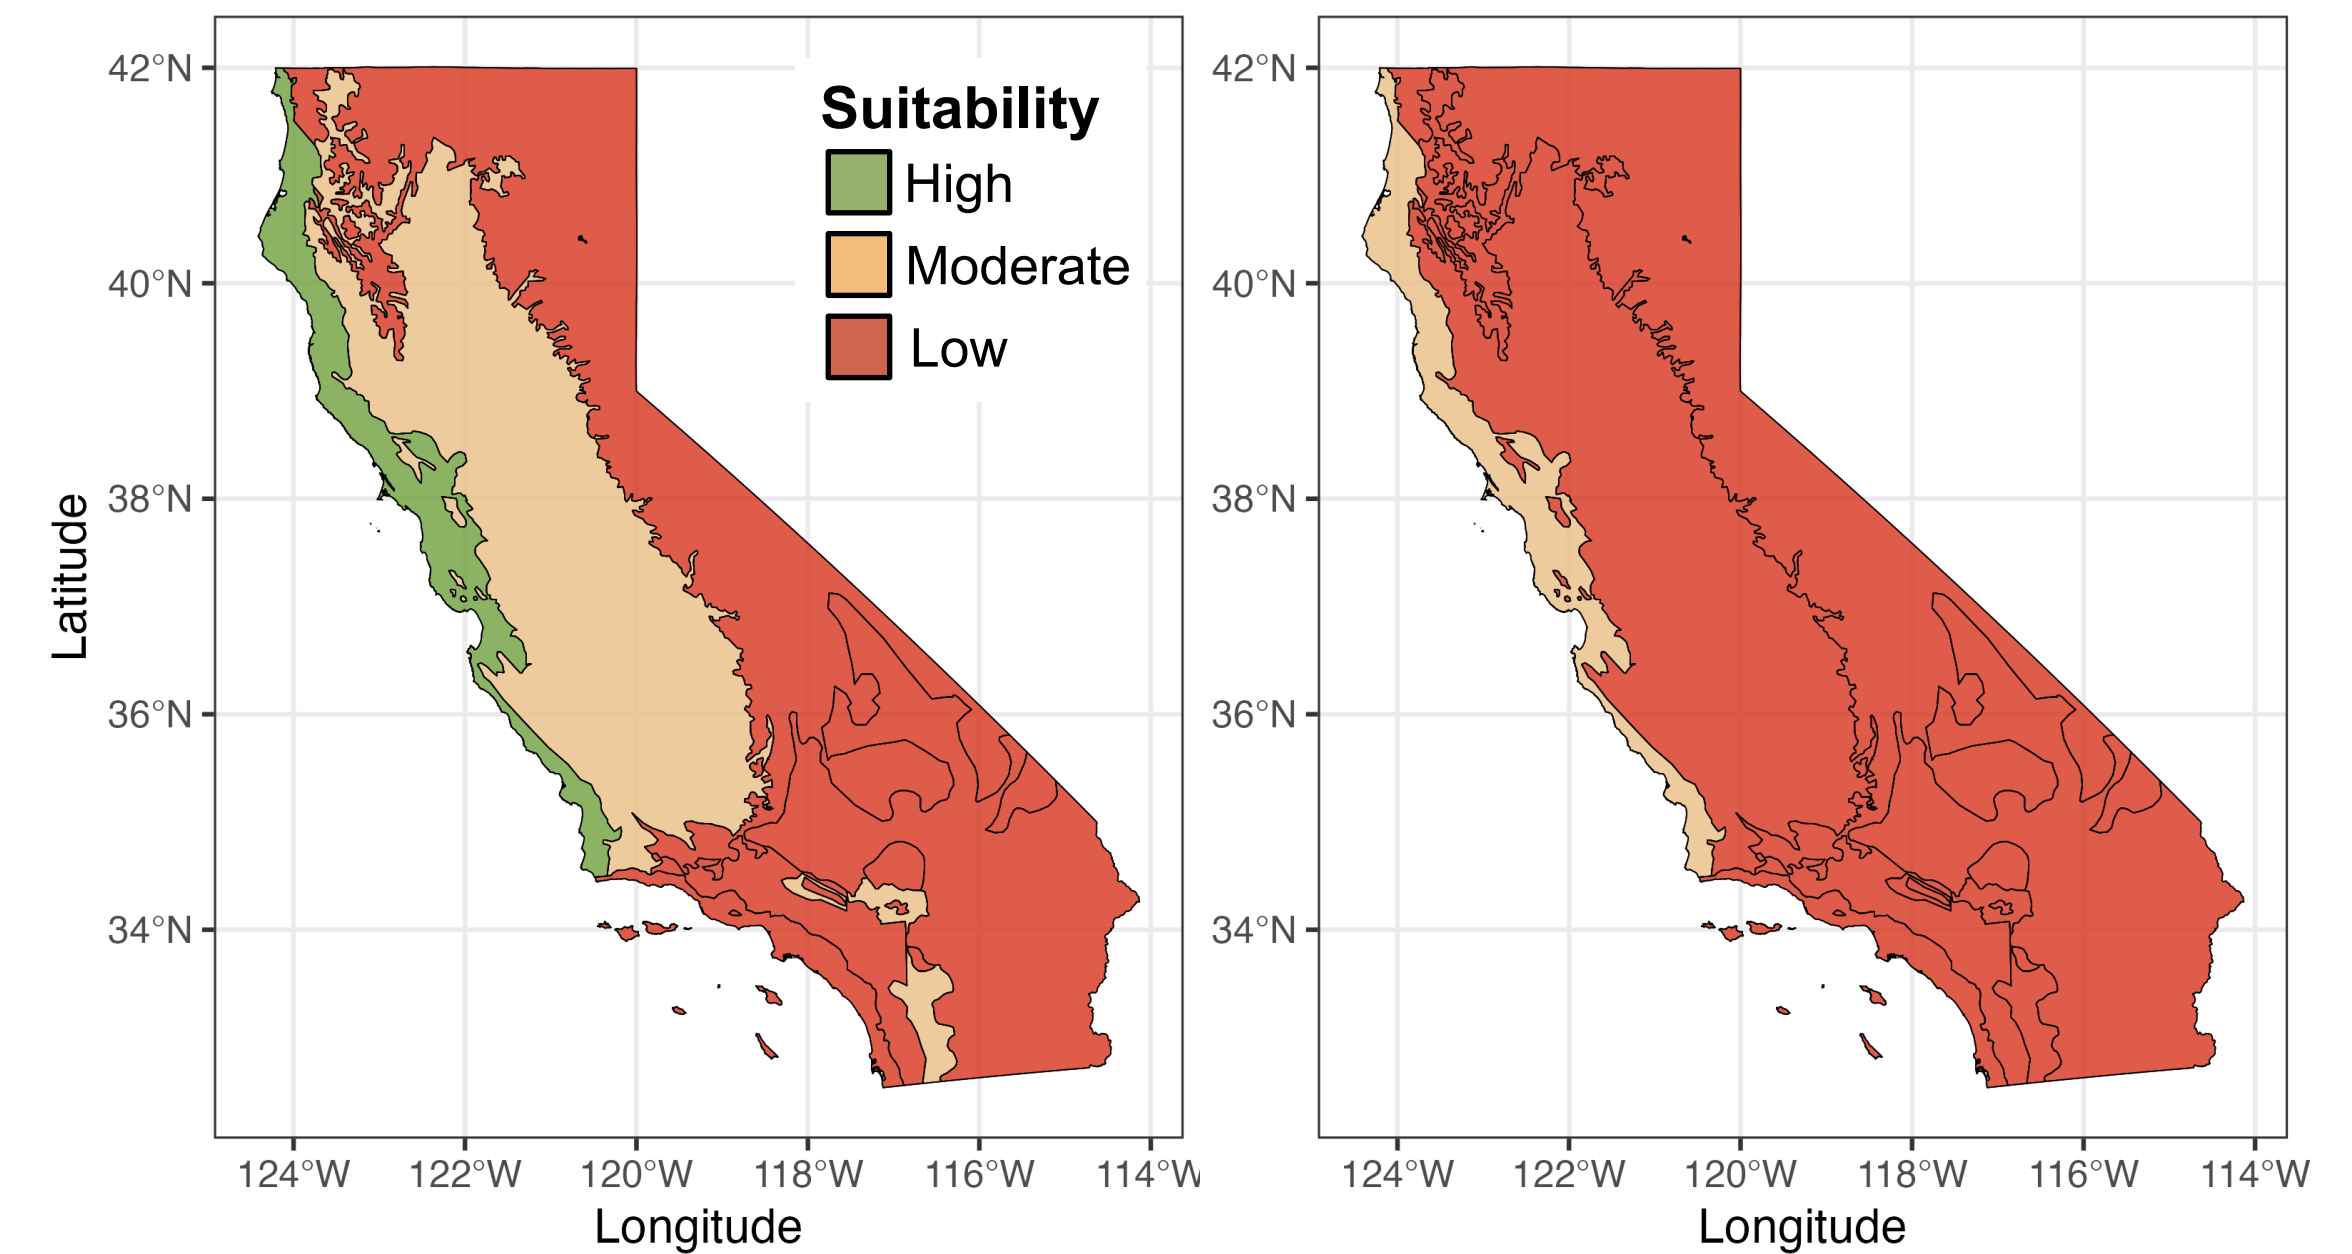

Coast Redwood (*Sequoia sempervirens*)

- Low suitability in the future
- 5th most common tree in Inland Valleys (61,000)

Current

2041-2070

Three suitable species for California's future climate

Interior Live Oak (*Quercus wislizeni*)

- Suitable for Northern CA, Interior West, Inland Valleys
- CA native

Three suitable species for California's future climate

Interior Live Oak (*Quercus wislizeni*)

- Suitable for Northern CA, Interior West, Inland Valleys
- CA native

Blue Palo Verde (*Parkinsonia florida*)

- Suitable for Interior West, Southwest Desert, Inland Valleys
- CA native

Three suitable species for California's future climate

Interior Live Oak (*Quercus wislizeni*)

- Suitable for Northern CA, Interior West, Inland Valleys
- CA native

Blue Palo Verde (*Parkinsonia florida*)

- Suitable for Interior West, Southwest Desert, Inland Valleys
- CA native

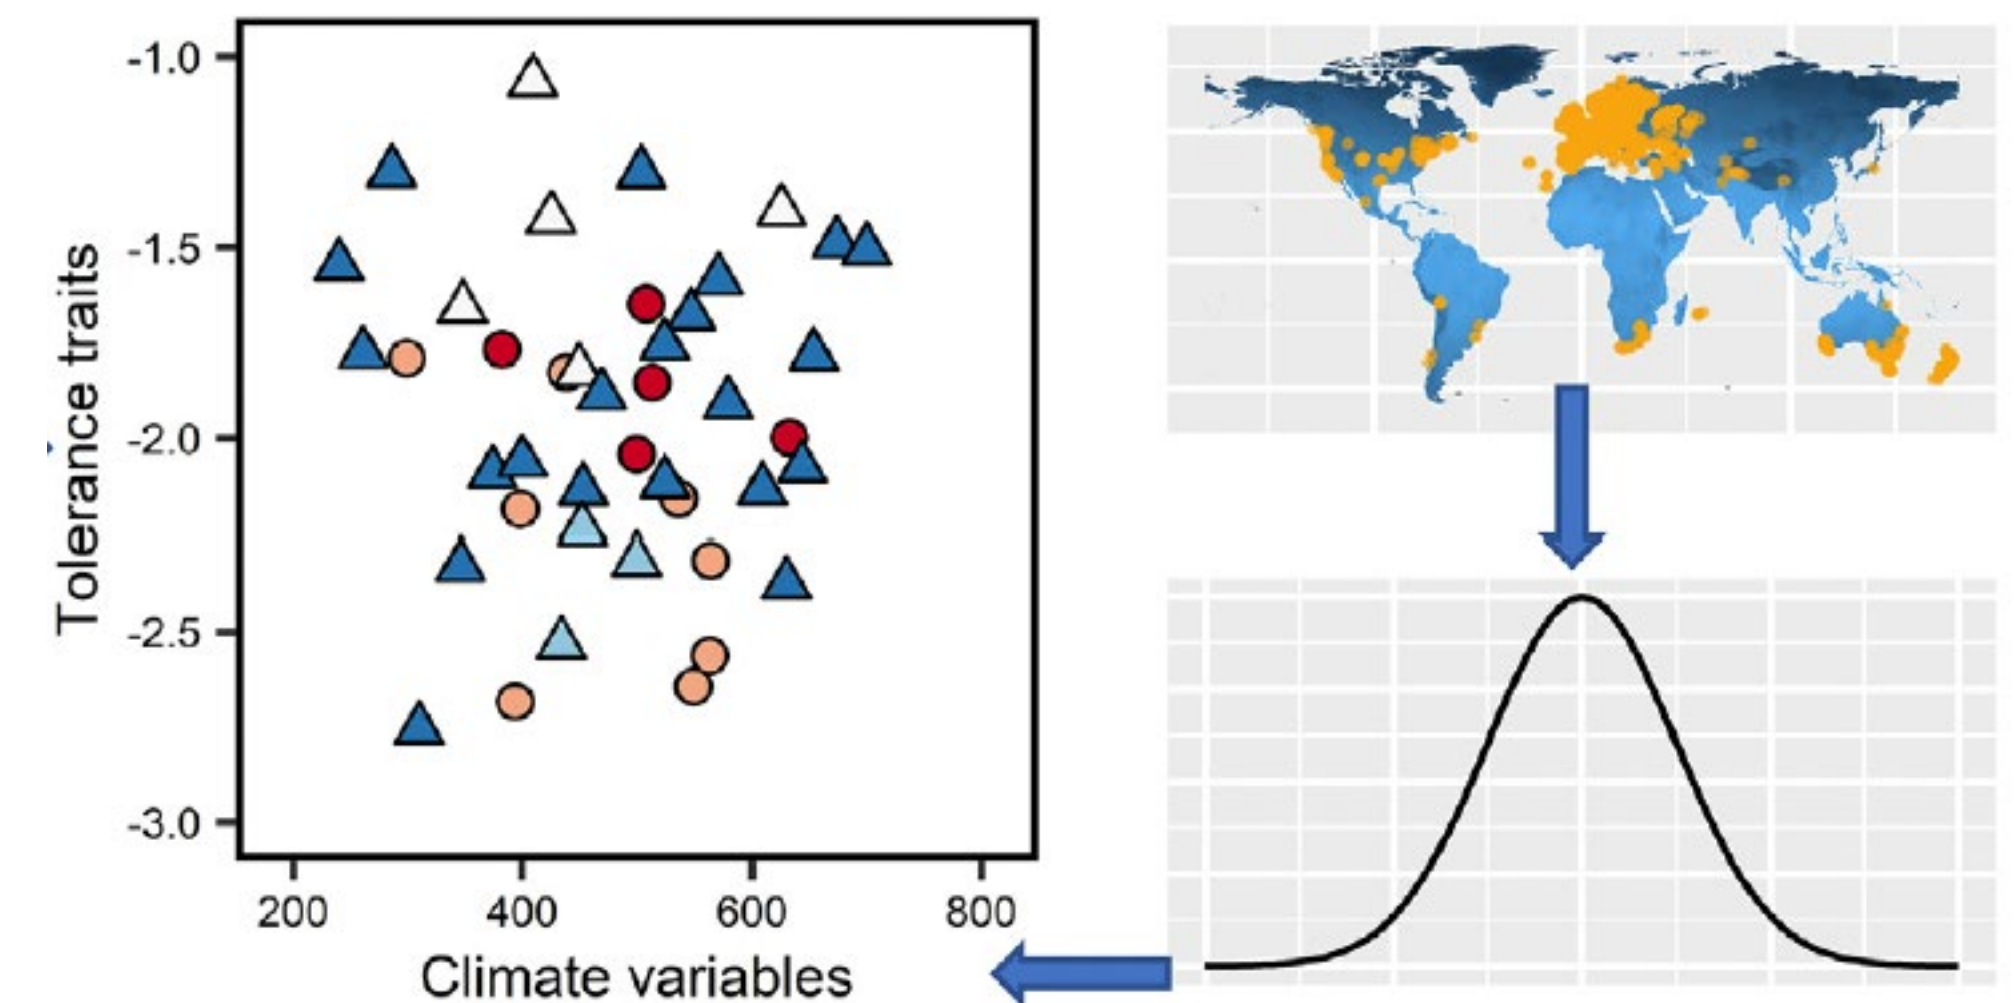

Manna Gum (*Eucalyptus viminalis*)

- Suitable in Northern and Southern CA
- Native to SE Australia and Tasmania

Considerations for data-driven species selection

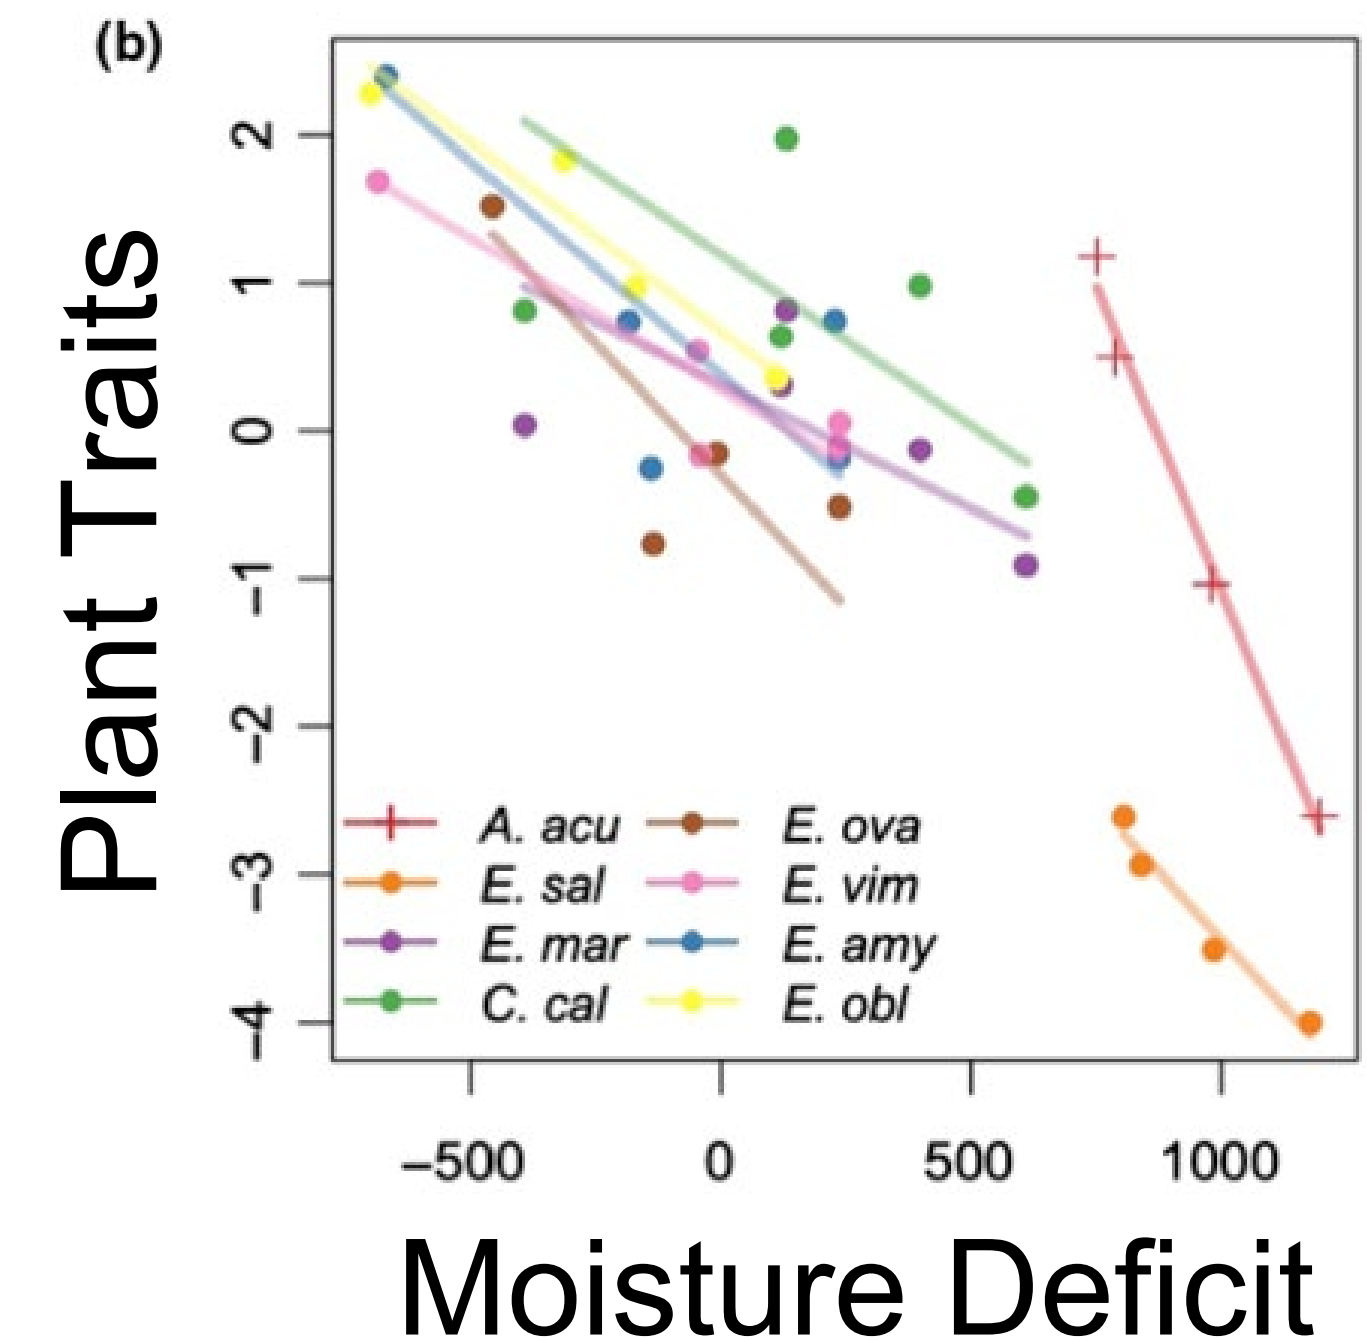

- Is tree physiology predicted by climate?

Global distribution of a tree species does not predict drought or thermal tolerance traits (Hanley et al., 2021)

Considerations for data-driven species selection

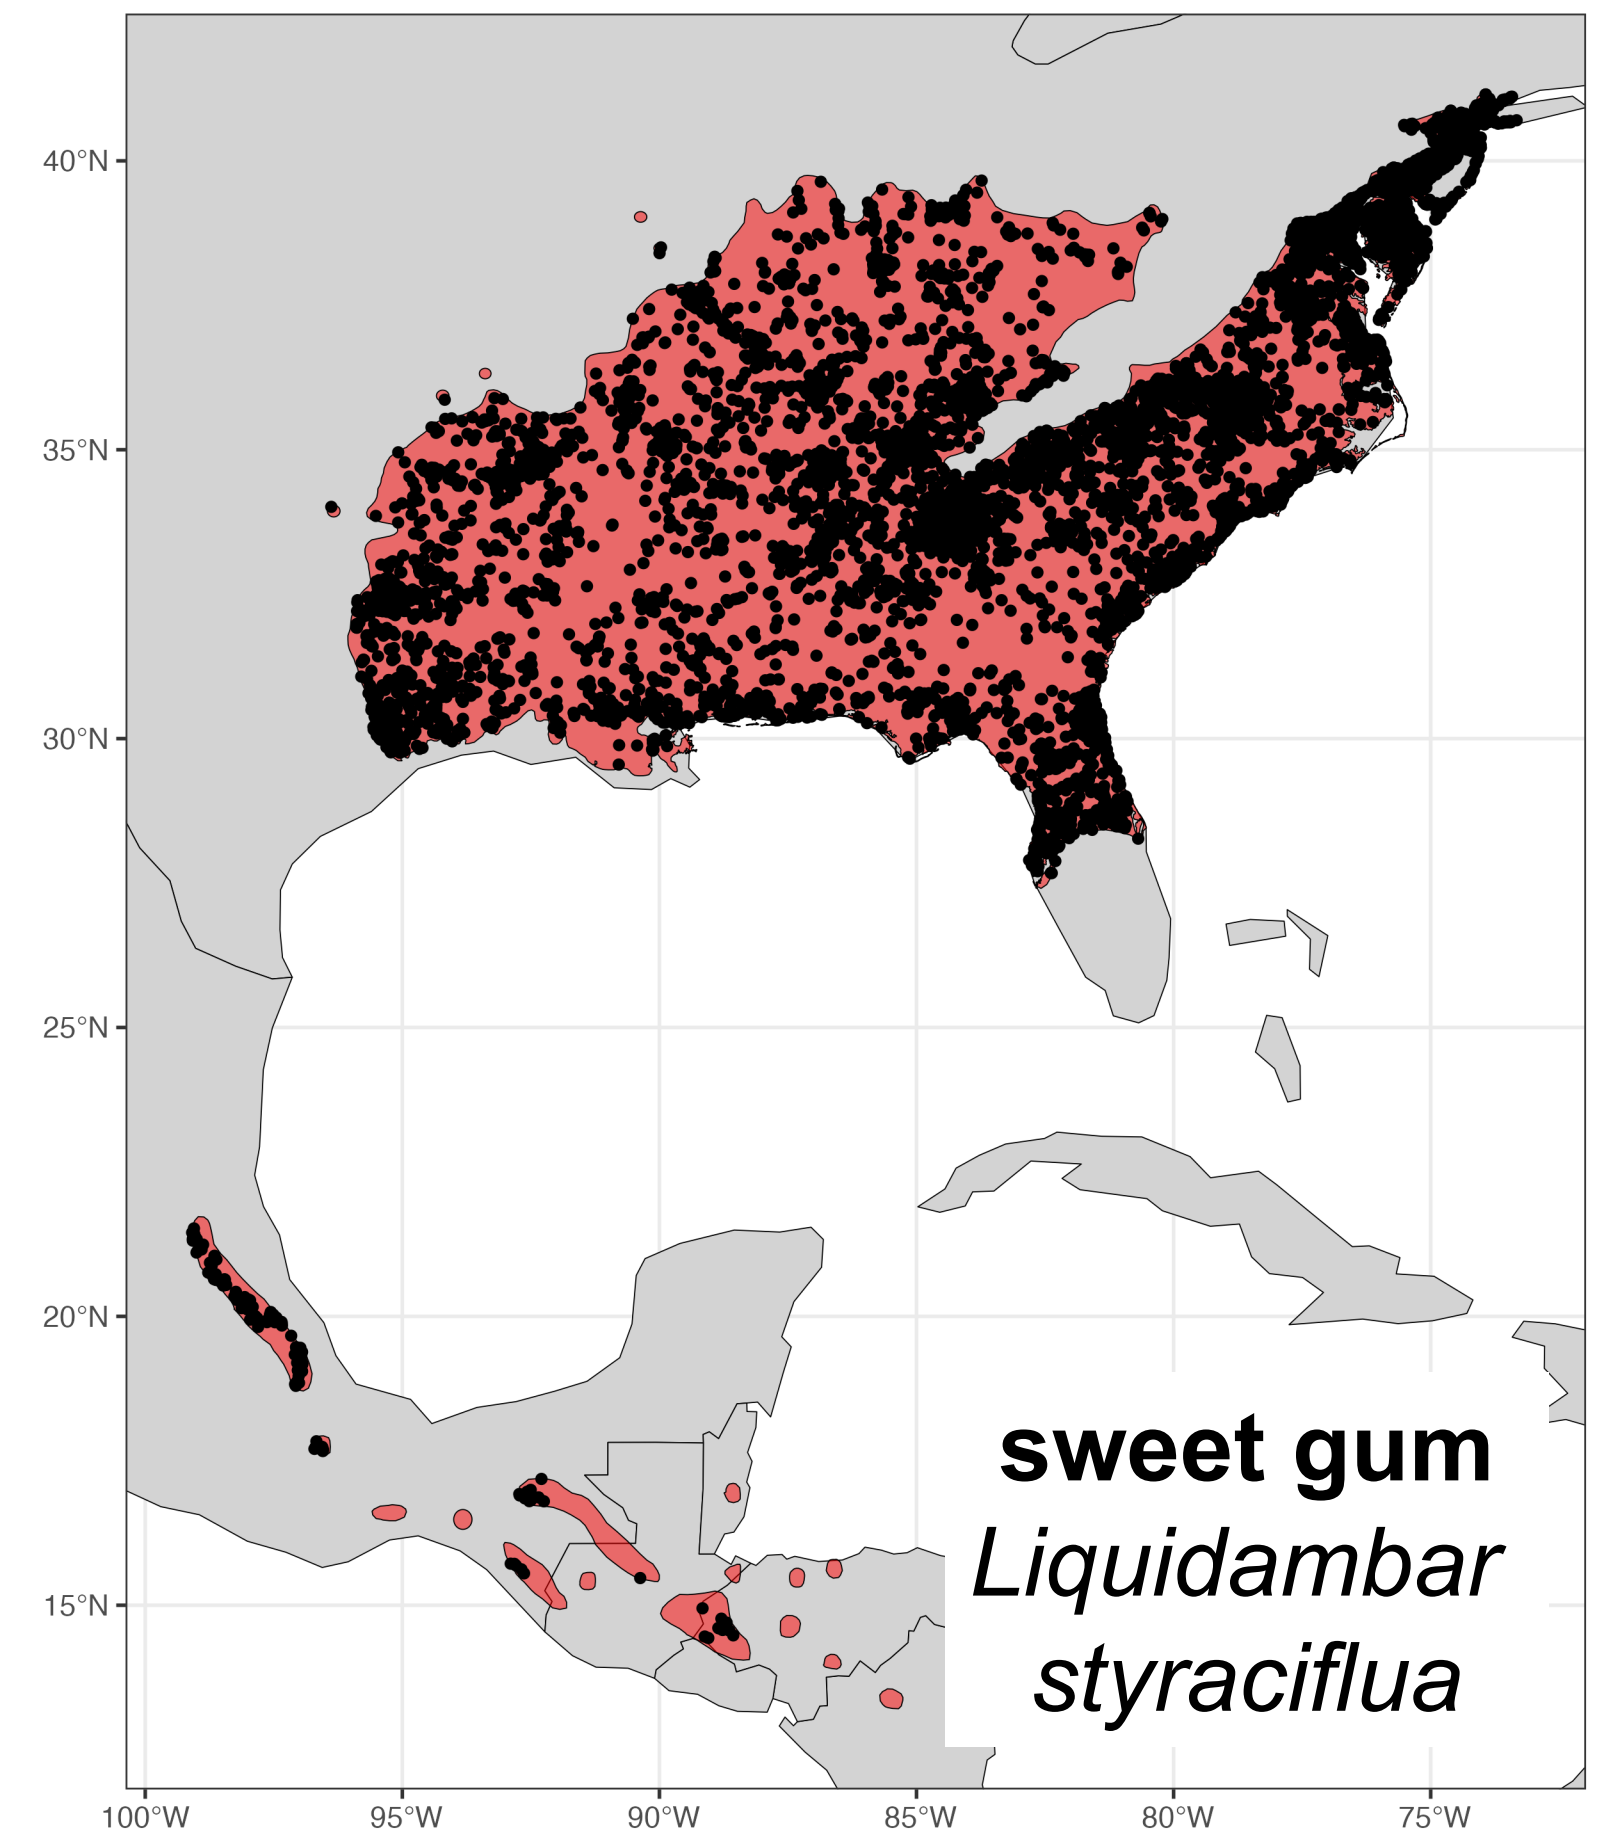

- Is tree physiology predicted by climate?

Moisture deficit predicts plant traits in wild populations (Anderegg et al. 2021)

Considerations for data-driven species selection

- Is tree physiology predicted by climate?
- Local population adaptation

Considerations for data-driven species selection

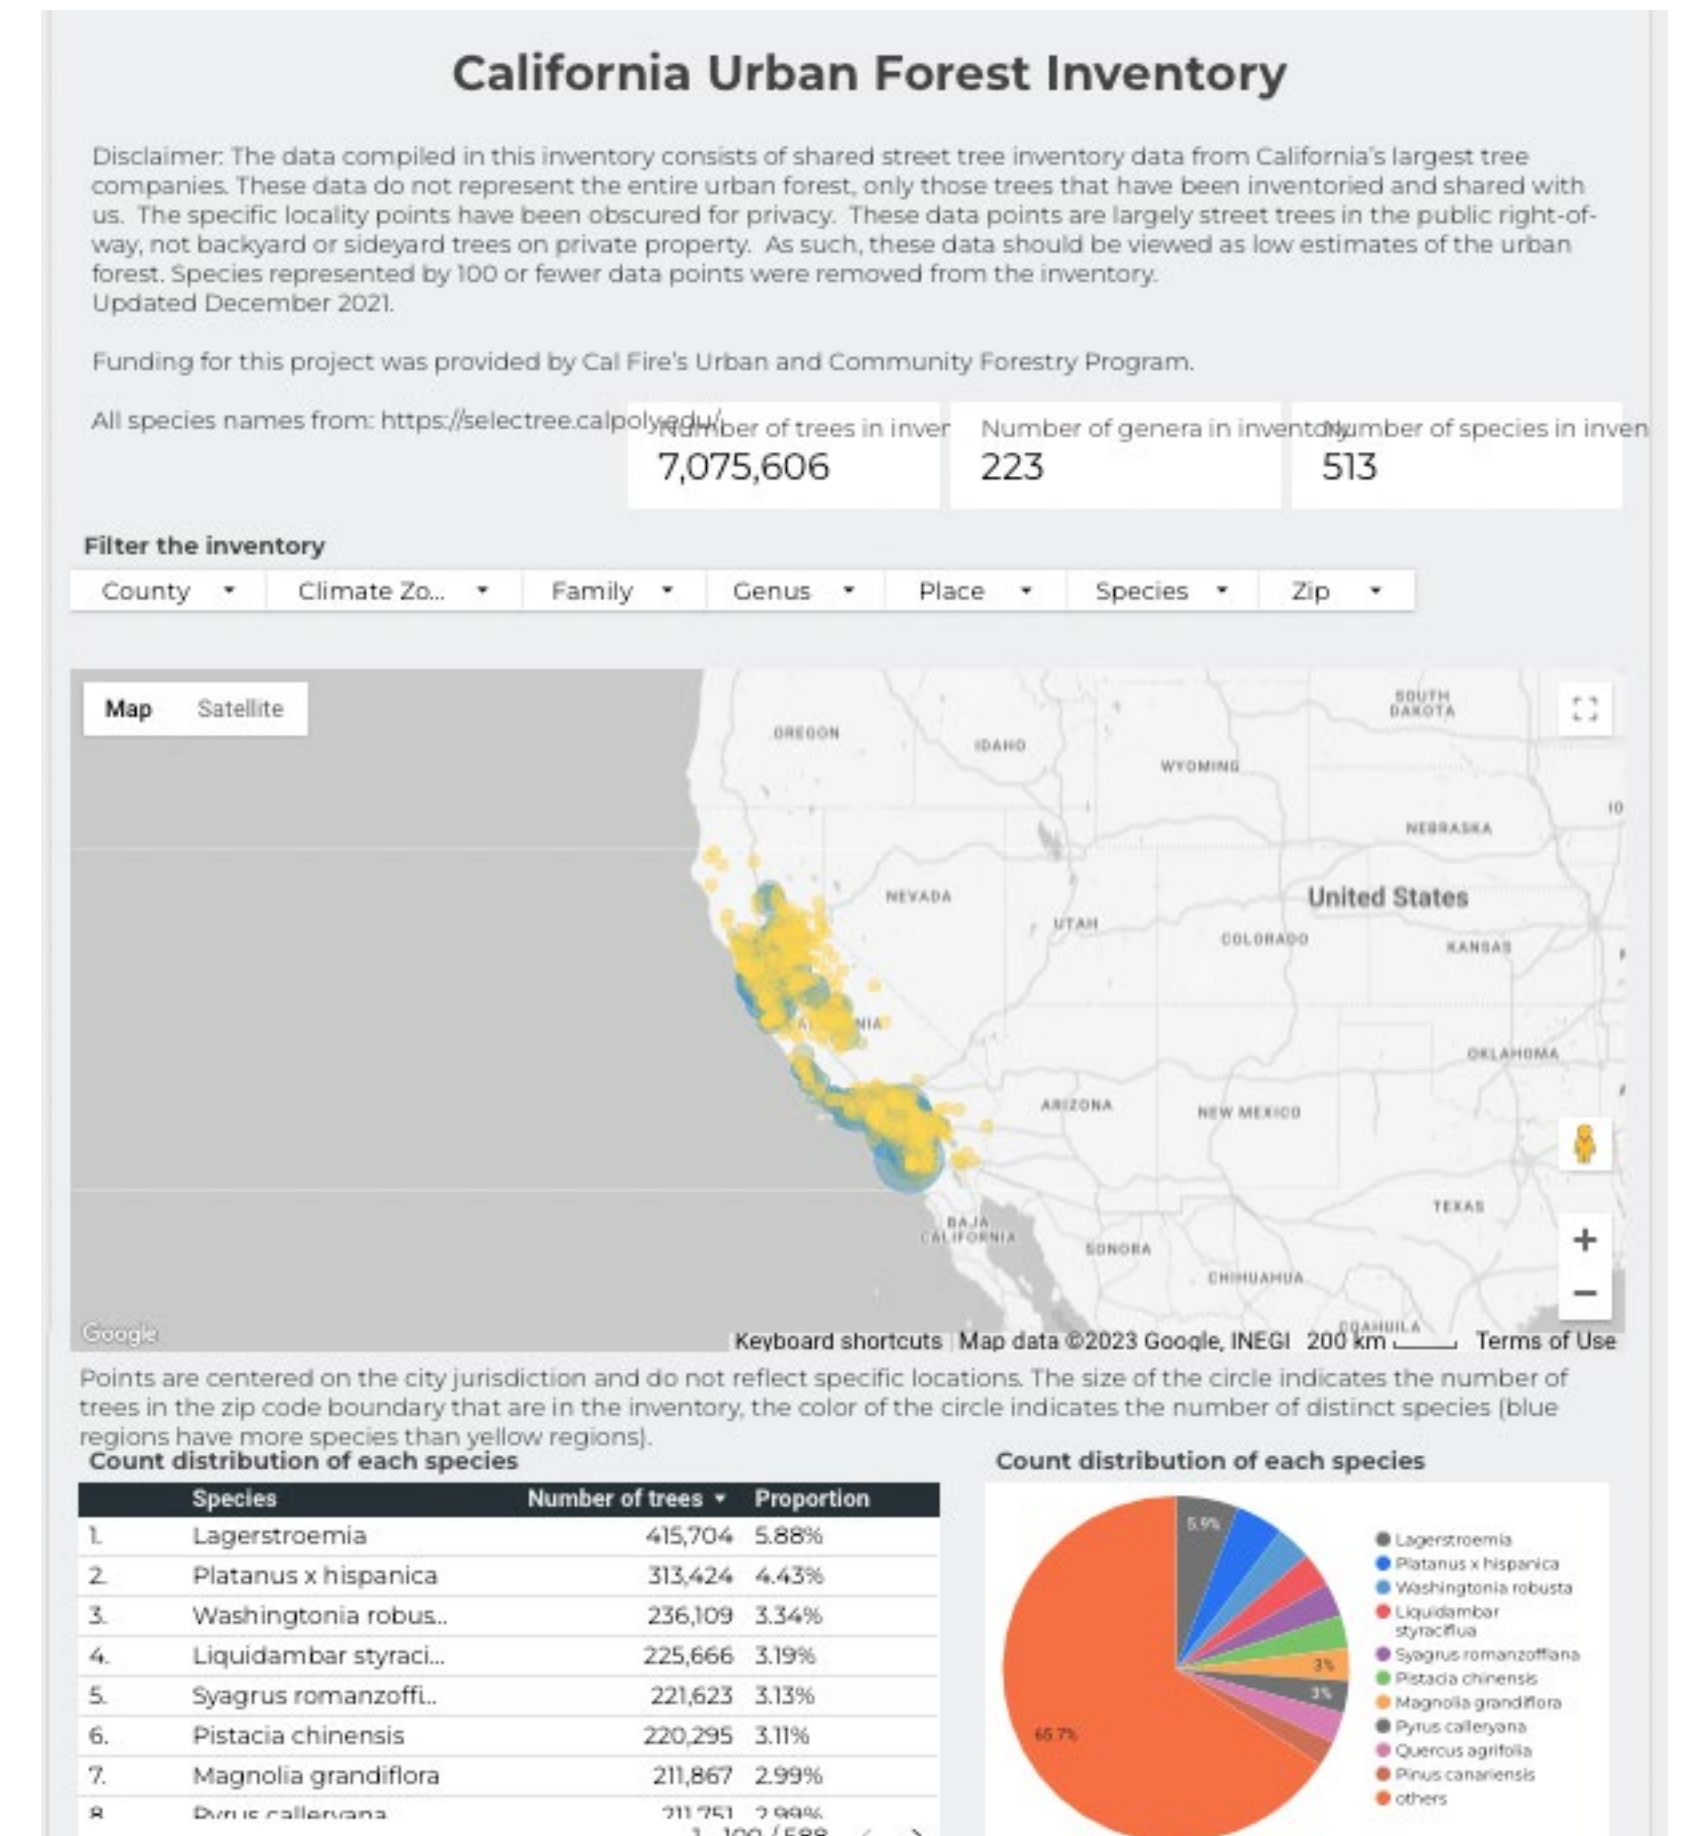

- Is tree physiology predicted by climate?
- Local population adaptation
- Microregion considerations

Fremont Cottonwood
Populus fremontii

Considerations for data-driven species selection

- Is tree physiology predicted by climate?
- Local population adaptation
- Microregion considerations
- Novel species for California's urban forest
- Cities with similar climate (McBride and Laćan, 2018)

Considerations for data-driven species selection

- Is tree physiology predicted by climate?
- Local population adaptation
- Microregion considerations
- Novel species for California's urban forest
 - Cities with similar climate (McBride and Laćan, 2018)
 - Species' native range

Temperature Analogues in Australia

Salmon gum
Eucalyptus salmonophloia
